Such records can be found in a number of areas of human endeavour. Modern medicine generates huge amounts of such digital data. Another ample is architectural design and the related architecture, engineering and construction (AEC) industry. Virtual communities in the broad sense of this word, which includes any communities mediated by digital technologies, are another example where generated data constitutes an integral data record. Such data may include data about member profiles, the content generated by the virtual community and communication data in different formats including e-mail, chat records, SMS messages, videoconferencing records. Not all multimedia data is so diverse. An example of less diverse data but data that is larger in terms of the collected amount is that generated by video surveillance systems where each integral data record roughly consists of a set of time-stamped images, the video frames. In any case, the collection of such integral data records constitutes a multimedia data set. The challenge of extracting meaningful patterns from such data sets has led to the research and development in the area of multimedia data mining.
