Minka Traditional Houses Of Rural Japan:

Minka Chūji Kawashima,1986 Briefly traces the history of Japan s traditional farmhouses shows a variety of regional styles and looks at the structure layout and construction of these homes Produktbeschreibung Traditional Japanese Architecture Mira Locher,2012-04-17 By examining the Japanese history of buildings and building designs from prehistory to modern day lovers of Japan will develop a deeper understanding and appreciation of this island country Simplicity sensitivity to the natural environment and the use of natural materials are the hallmarks of Japanese architecture The Art of Japanese Architecture provides a broad overview of traditional Japanese architecture in its historical and cultural context It begins with a discussion of prehistoric dwellings and concludes with a description of modern Japanese buildings Important historical influences and trends notably the introduction of Buddhist culture from Korea and China the development of feudalism and the influence of modern Western styles of building are all discussed in detail as facets of Japanese design Through all of these changes a restrained architectural tradition developed in marked contrast to an exuberant tradition characterized by monumentality and the use of bold colors The book provides tremendous insights into the dynamic nature of Japanese architecture and how it reflects an underlying diversity within Japanese culture The book is profusely illustrated with over 370 color photographs woodblock prints maps diagrams and specially commissioned watercolors **The Greenwood**

Encyclopedia of Homes through World History James M. Steele,2009-03-30 The house throughout history in every place in the world has been built to provide shelter from the elements The dwellings that have resulted are as different as the people that have built them the social norms that prevailed at the time and place in which they were built and the natural environment that they adapted to Studying them now in a comprehensive way allows us to understand the social political economic and religious conditions that existed for their inhabitants They are a three dimensional record of culture Twenty four pages of color images along with black and white images through three volumes illustrate the homes of people throughout the world The volumes cover ancient times to the late Middle Ages the Renaissance to the Industrial Revolution and the Post Industrial Revolution to the Present **Landscape Ecology for Sustainable Society** Sun-Kee

Hong,Nobukazu Nakagoshi,2018-03-23 The research category of the landscape ecology which researches the structure functions and the spatio temporal changes of the ecological landscapes has now been contributing to the human life and the shifts of the socio economic paradigm Global warming has been influencing the universal life patterns of the mankind which have been maintained in the past several hundreds of years And it has been having the influences on the international social problems and economic problems Although the diverse plans for adapting to the climate changes have been the topics of the conservations among the ecologists internationally it is the reality that the speed of the changes of the environment has been quicker than the time it takes to complete the solutions In order to maintain the sustainable earth and the sustainable society the role of the landscape ecology has been coming to the fore Especially the theories and the methodologies of the landscape

ecology have been applied to the multidisciplinary researches by going beyond the research category of ecology including the maximization of the efficiencies of the land spaces the management of the ecological space habitats in which the biological diversity can be maintained the utilization of the resources that are absolutely needed by the human beings Here it is compressed to water energy and food etc and until reaching the human society It is considered that to that extent the utilizations and the applications of the landscape ecology are very much needed for the diagnoses and the evaluations of the global environmental problems which have been proceeded with rapidly in the modernity This book is not comprised of any general remarks that explain the theories and the methods of the landscape ecology Already based on the basic theories of the landscape ecology the writers have conducted the investigations on the farm villages the cities and the coastal ecosystems And through the space analyses and interpretations the structure and functions of the landscapes were analyzed Of course in this book too the diverse ecosystems and the landscape ecological methodologies regarding the land use have been presented However the core of this book focuses more on what role the landscape ecology must play for the materialization of a sustainable society in the future At the farm villages the sustainable agriculture will be presented and at the cities the discussions on the green networks and the energies will be proceeded with Also regarding the coasts and the seas a thesis on the safety of the life zones of the residents adjacent to the sea and on the conservation of the island ecosystems will be presented The sustainable society is a system that is formed by having the sustainable development as a basis It is considered to be one aspect within a kind of a sustainable process with regard to which the natural world and the human world coexist and are in a symbiotic relationship harmoniously In order to maintain the biodiversity the reasonable adjustments of the human activities like the use of the resources are absolutely needed Without the biological resources the cultural diversity of the human beings too cannot exist Consequentially recently and internationally there are a lot of the case examples that express the biocultural diversity by linking the biological diversity with the cultural diversity In this book the role of the landscape ecology as an academic link which can connect the two possible if possible is highly expected It is indeed the biocultural landscape It can be said that this concept also is the interconnection of the multidisciplinary spaces that must be dealt with in the modern landscape ecology Through this book it is intended to present a new directionality which can contribute to the sustainable society at the same time as the organization of the theories and the methods of the landscape ecology
