**Cancer Among Blacks and Other Minorities**, 1986 Cancer Disparities Ronit Elk, Hope Landrine, American Cancer Society, 2011-10-25 The volume sheds new light on reducing disparities by complementing currently available monographs through the provision of solutions that are not only theoretically innovative but also empirically effective Indeed Cancer Disparities Causes and Evidence Based Solutions admirably achieves two key objectives that are crucial for advances in the field a providing an up to date overview of cancer related disparities and b describing

evidence based interventional approaches to close the cancer related disparities gap The implicit promise is that these approaches will enable public health practitioners cancer control workers and community members to use or adapt them in their own communities This volume is essential to help make that promise a reality

**PsycCRITIQUES** Cancer is not randomly distributed in the United States Its incidence varies by race ethnicity socioeconomic status and other geographic and demographic factors This volume co published with the American Cancer Society is the first to examine the biological racial and socioeconomic factors that influence cancer incidence and survival In addition it presents 15 previously unpublished evidence based interventions to reduce and eliminate cancer disparities The book explains the nature scope and causes of cancer disparities across different populations and then presents unique programs proven to reduce such inequalities in the areas of cancer prevention screening and early detection treatment and survivorship They represent a variety of cancers populations and communities across the U S Descriptions of each intervention include tests of effectiveness and are written in sufficient detail for readers to replicate them within their own communities

**Cancer Health Disparities** Chanita Hughes Halbert, PhD, 2023-11-08 Despite improvements in strategies for early detection and cancer treatment racial and ethnic groups and individuals from other medically underserved populations continue to experience disparities in cancer morbidity and mortality Research in cancer health disparities has evolved from first generation studies that described racial differences in morbidity and mortality to research that examines the efforts of interventions that focus on increasing access to early detection and treatment As a result of these efforts racial background socioeconomic characteristics access to high quality cancer care and psychological and social factors have been documented as important determinants of cancer health disparities these factors provide the context within which cancer is detected treated and prevented The field of cancer health disparities is now at a critical juncture where it is essential to move beyond descriptive information on determinants of disparities in cancer morbidity and mortality to translational studies that examine basic biological processes and how these processes interact with social psychological and behavioral factors to contribute to disparities in cancer risk and outcomes Empirical evidence about the influence of multilevel determinants has grown and now more than ever efforts are being made to understand the independent and interactive effects of biological psychological behavioral and social determinants of cancer health disparities and to translate this information into sustainable interventions for cancer prevention control and treatment Provides an in depth examination of emerging evidence about multilevel determinants of cancer health disparities Describes novel frameworks and approaches that are being used to understand and address cancer health disparities Presents evidence based interventions that have potential to achieve equity

Department of Health and Human Services. Task Force on Black and Minority Health, 1985 **How Cancer Crossed the Color Line** Keith Wailoo, 2011-02-01 In the course of the 20th century cancer went from being perceived as a white woman's nemesis to a democratic disease to a fearsome threat in communities of color Drawing on film and fiction on medical and epidemiological evidence and on patients accounts Keith Wailoo tracks this transformation in cancer awareness revealing how not only awareness but cancer prevention treatment and survival have all been refracted through the lens of race Spanning more than a century the book offers a sweeping account of the forces that simultaneously defined cancer as an intensely individualized and personal experience linked to whites often categorizing people across the color line as racial types lacking similar personal dimensions Wailoo describes how theories of risk evolved with changes in women's roles with African American and new immigrant migration trends with the growth of federal cancer surveillance and with diagnostic advances racial protest and contemporary health activism The book examines such powerful and transformative social developments as the mass black migration from rural south to urban north in the 1920s and 1930s the World War II experience at home and on the war front and the quest for civil rights and equality in health in the 1950s and 60s It also explores recent controversies that illuminate the diversity of cancer challenges in America such as the high cancer rates among privileged women in Marin County California the heavy toll of prostate cancer among black men and the questions about why Vietnamese American women's cervical cancer rates are so high A pioneering study *How Cancer Crossed the Color Line* gracefully documents how race and gender became central motifs in the birth of cancer awareness how patterns and perceptions changed over time and how the war on cancer continues to be waged along the color line
