controlling genetic and congenital disorders in Eastern Mediterranean countries Addressed to policy makers and service providers the book aims to heighten awareness of these disorders while also increasing understanding of the interventions

available for prevention and control Although all major hereditary disorders are covered particular attention is given to haemoglobin disorders including thalassaemia and sickle cell disease which are extremely common in these countries The

book has fourteen chapters presented in four parts Part one introduces the growing problem of genetic disorders outlines

options for treatment and prevention and explains the principals of diagnosis Current and future applications of genetic

technology are also briefly discussed Chapters in part two assess the epidemiological situation in Eastern Mediterranean

countries for congenital malformation and chromosomal disorders single gene disorders and several common diseases such

as hypertension diabetes coronary heart disease and some cancers that are now know to have a hereditary component The

genetic implications of consanguineous marriage which remains common in some of these countries are considered in

particular detail Available approaches for prevention are described in part three Separate chapters cover primary health care

Human Populations Anthony J. Boyce,Vernon Reynolds,1995 Human populations groups of people living together and

sharing a number of biological and social characteristics differ from one another in many important respects Human

Evolution Diversity and Adaptation provides a succinct and insightful exploration of the many genetic and environmental

conditions that have led to such differences In describing the specific kinds of diversity genetic morphological social and

disease associations the book presents case studies that clearly show how such differences interact to produce the variety of

human populations that exist around the world It also stresses the point that human history is to some extent the history of

migration resulting in populations that are not discrete entities but rather a continuous gradation of various physical and

cultural attributes Splendidly written by leading experts Human Evolution is an excellent compendium that explores the

multifaceted field of human evolution **The Future of Ethnicity, Race, and Nationality** Walter L. Wallace,1997-09-30
This broad visioned and insightful book examines the march toward global consolidation of our many ethnic racial and nationality groups About 100 000 years ago the dispersion of what was then a homogenous human population from its point of origin in Eastern Africa began This was slowly followed by the emergence of ethnic and racial differences among the then separated human populations The Agricultural Revolution 10 000 years ago began the long process of re establishing contact and eventually consolidating the human species once again but this time globally Wallace contends that consolidation will contribute greatly to the survival of humankind by reducing the deadly threats humans pose to each other He also argues that ethnic racial and nationality consolidation does not imply cultural homogeneity diversity based on interest vocation and other factors will serve as even more fertile replacements The book is expertly researched **Research Awards Index ,**
