Minimally Invasive Techniques For Neurosurgery Current Status And Future Perspectives:

Minimally Invasive Techniques for Neurosurgery Dieter Hellwig, Bernhard L. Bauer, 2012-12-06 A summary of all facets of this new and rapidly developing field in neurosurgery. Besides neuroendoscopy the book's main topics are neuronavigation, functional neurosurgery, radiosurgery, neurotransplantation and molecular neurosurgery. Provides a thorough overview of the state of the art and future perspectives in minimally invasive neurosurgery.

Key Concepts in MIN - Intracerebral Hemorrhage Evacuation Klaus Dieter Maria Resch, 2022-03-22 This book adds in chapter 1 and 2 the MIN key techniques Laser and sealing, completing the 3 MIN key techniques of the first volume. In chapter 3 the evolution of anatomy to a key concept of MIN is described, presenting theory and reality of anatomical perspectives that can be used by the MIN surgeon directly in the OR. Anatomy must be elaborated according to Gestalt Theory to become a Key of MIN. Still, anatomy is the House of Medicine giving a mental place to all knowledge, theories and biological functions. The surgical simulation concept of chapter 4 as training environment follows also as a key concept of MIN. In this chapter we draw the line from Gestalt Anatomy to a Surgical Simulation Application in Pathological Anatomy exemplified in aneurysm cases. Chapter 5 presents the best preservation technique of anatomical perishable matter forming durable, dry and odorless specimens of unknown precision and beauty. The scientific value of this unique technique and the benefit for MIN are shown by many examples. With the Plastination gallery of chapter 6 the best head plastinates and sheet plastinates of head and brain complete the volume. Many of the specimens have been shown around the globe in the famous exhibitions "body worlds". Prof Dr G v Hagens, Inventor of Plastination.

Neuroendoscopy Spyros Sgouros, 2013-11-22 As a result of technological improvements, neuroendoscopy is now used in the treatment of many more patients, enabling the performance of previously unavailable operations with low complication rates and rapid patient recovery. This book presents the distilled experience of world experts in this evolving field. Current applications in a wide variety of settings are explained in detail and likely future developments are identified. In addition, the available neuroendoscopic instruments are reviewed and the results of international trials and collaborative studies presented. This book will fully acquaint the reader with the breadth and depth of available neuroendoscopy techniques and their impressive therapeutic potential. It should serve as the reference book on neuroendoscopy for the next 10 years.
