## **Mips X Risc Microprocessor:**

**The MIPS-X RISC Microprocessor** Paul Chow, 2013-03-09 The first Stanford MIPS project started as a special graduate course in 1981 That project produced working silicon in 1983 and a prototype for running small programs in early 1984 After that we declared it a success and decided to move on to the next project MIPS X This book is the final and complete word on MIPS X The initial design of MIPS X was formulated in 1984 beginning in the Spring At that time we were unsure that RISC technology was going to have the industrial impact that we felt it should We also knew of a number of architectural and implementation flaws in the Stanford MIPS machine We believed that a new processor could achieve a performance level of over 10 times a VAX 11 780 and that a microprocessor of this performance level would convince academic skeptics of the value of the RISC approach We were concerned that the flaws in the original RISC design might overshadow the core ideas or that attempts to industrialize the technology would repeat the mistakes of the first generation designs MIPS X was targeted to eliminate the flaws in the first generation designs and to boost the performance level by over a factor of five
