Thanks to remarkable advances in modern health care attributable to science engineering and medicine it is now possible to cure or manage illnesses that were long deemed untreatable At the same time however the United States is facing the vexing challenge of a seemingly uncontrolled rise in the cost of health care Total medical expenditures are rapidly approaching 20 percent of the gross domestic product and are crowding out other priorities of national importance The use of increasingly expensive prescription drugs is a significant part of this problem making the cost of biopharmaceuticals a serious national concern with broad political implications Especially with the highly visible and very large price increases for prescription drugs that have occurred in recent years finding a way to make prescription medicines and health care at large more affordable for everyone

has become a socioeconomic imperative Affordability is a complex function of factors including not just the prices of the drugs themselves but also the details of an individual's insurance coverage and the number of medical conditions that an individual or family confronts Therefore any solution to the affordability issue will require considering all of these factors together The current high and increasing costs of prescription drugs coupled with the broader trends in overall health care costs is unsustainable to society as a whole Making Medicines Affordable examines patient access to affordable and effective therapies with emphasis on drug pricing inflation in the cost of drugs and insurance design This report explores structural and policy factors influencing drug pricing drug access programs the emerging role of comparative effectiveness assessments in payment policies changing finances of medical practice with regard to drug costs and reimbursement and measures to prevent drug shortages and foster continued innovation in drug development It makes recommendations for policy actions that could address drug price trends improve patient access to affordable and effective treatments and encourage innovations that address significant needs in health care

The Cost of Prescription Drugs United States. Congress. Senate. Committee on Health, Education, Labor, and Pensions, 2022

Prescription for the People Fran Quigley, 2017-11-15 In *Prescription for the People* Fran Quigley diagnoses our inability to get medicines to the people who need them and then prescribes the cure He delivers a clear and convincing argument for a complete shift in the global and U S approach to developing and providing essential medicines and a primer on how to make that change happen Globally 10 million people die each year because they are unable to pay for medicines that would save them The cost of prescription drugs is bankrupting families and putting a strain on state and federal budgets Patients desperate need for affordable medicines clashes with the core business model of the powerful pharmaceutical industry which maximizes profits whenever possible It doesn't have to be this way Patients and activists are aiming to make all essential medicines affordable by reclaiming medicines as a public good and a human right instead of a profit making commodity In this book Quigley demystifies statistics and terminology offers solutions to the problems that block universal access to medicines and provides a road map for activists wanting to make those solutions a reality
