Ian Cloete, Jacek M. Zurada, 2000 Looking at ways to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Neurocomputing methods are loosely based on a model of the brain as a network of simple interconnected processing elements corresponding to neurons These methods derive their power from the collective processing of artificial neurons the chief advantage being that such systems can learn and adapt to a changing environment In knowledge based neurocomputing the emphasis is on the use and representation of knowledge about an application Explicit modeling of the knowledge represented by such a system remains a major research topic The reason is that humans find it difficult to interpret the numeric representation of a neural network The key assumption of knowledge based neurocomputing is that knowledge is obtainable from or can be represented by a neurocomputing system in a form that humans can understand That is the knowledge embedded in the neurocomputing system can also be represented in a symbolic or well structured form such as Boolean functions automata rules or other familiar ways The focus of knowledge based computing is on methods to encode prior knowledge and to extract refine and revise knowledge within a neurocomputing system Contributors C Aldrich J Cervenka I Cloete R A Cozzio R Drossu J Fletcher C L Giles F S Gouws M Hilario M Ishikawa A Lozowski Z Obradovic C W Omlin M Riedmiller P Romero G P J Schmitz J Sima A Sperduti M Spott J Weisbrod J M Zurada      **Methodologies for Intelligent Systems, 4** Zbigniew Raś, 1989      **Third International Conference on Supercomputing, Proceedings: Supercomputer projects, applications and artificial intelligence**, 1988      *IEEE International Conference on Systems Engineering, September 17-19, 1992, International Conference Center, Kobe, Japan, 1992*      *IEEE International Conference on Systems Engineering, 1992*
