**Landmark Essays on Writing Process** Sondra Perl,1994 First Published in 1995 Routledge is an imprint of Taylor Francis an informa company      Newurotic Distortion of the Creative Process Lawrence S. Kubie,1966      **The Nature of Creativity** Robert J. Sternberg,1988-05-27 This 1988 book provides sixteen chapters by acknowledged experts on the richness and diversity of psychological approaches to the study of creativity      The Creativity Question Albert Rothenberg,Carl R. Hausman,1976 Albert Rothenberg a psychiatrist and Carl R Hausman a philosopher have prepared a truly comprehensive interdisciplinary book of readings on creativity This group of selections from the works of writers in psychiatry philosophy psychology psychoanalysis and education brings together for the first time major theoretical works outstanding empirical findings and discussions of the definition and nature of creativity The organization of The Creativity Question is unique it illustrates the various approaches and basic assumptions underlying studies of creativity throughout the course of history up to the present time The main body of selections appears under the categories of descriptions attempts at explanation and alternate approaches As specific orientations to creativity can be traced to particular initiating thinkers and investigators there is a special chapter on seminal accounts containing selections from the works of Plato Aristotle Kant Galton and Freud Another chapter includes recent illustrations of special types of exploratory trends creativity of women brain research synectics extrasensory perception behaviorism and creativity computer programming This organization highlights the tension between strictly scientific accounts and alternative approaches offering new ways of understanding The editors have provided for the books as a whole and for each chapter explanation and discussion of the basic issues raised by the various approaches to creativity      *The Nature of the Creative Process in Art* Jaroslav Havelka,2012-12-06 No single factor determined the growth of this book It may have been that as a novice researcher in Behavioral Psychology I experienced growing discontent with the direction of intellectual activity in which the accent was on methodology and measurement with a distinct atmosphere of dogmatism insecurity and defensiveness The anathema of tender mindedness was attached to any study of mental manifes tations that avoided laboratory confirmation and statistical significance Man in his uniqueness and unpredictable potentialities remained un explored Yet outside the systematic vivisection of variables and their measurement men of originality and genius were studying the mind in its complex yet natural interaction of aspirations values and creative capacities It was almost too easy for me to turn to them for the re orientation of my psychological interest and it was not difficult to find in Freud the most daring and penetrating representant of humanistic psychology Furthermore it could have been the fact that Freud s thoughts on creative processes appeared to me at once starkly original and yet incomplete and fragmentary that led me to reconsider and expand on them Freud s fascination with culture and creativity

although frank and serious led him to a peculiar indecisiveness and overcautiousness which was radically different from the dramatic boldness of his therapeutic methods and the depth of his personality theories      The Creative Process Todd Lubart, 2018-08-29 The creative process refers to the sequence of thoughts and actions that are involved in the production of new work that is both original and valuable in its context This book examines this process across the domains of visual art writing engineering design and music It characterizes each domain's creative process based on evidence stemming from creators' accounts of their own activity and a wide range of observational material and theories specific to each field Results from empirical research are then presented across a set of closely linked chapters using a common set of methodologies that seek to trace the creative process as it unfolds This highly interdisciplinary edited collection offers valuable insight into the creative process for scholars and practitioners in the fields of psychology education and creative studies as well as for any other readers interested in the creative process Todd Lubart brings together a group of authors who are themselves actively involved in their respective creative fields and invites readers to adopt a broad perspective on the creative process in order to unravel some of its mysteries      Readings in Managerial Psychology Harold J. Leavitt, Louis R. Pondy, David M. Boje, 1989 With more than half the papers new to this book the fourth edition of Readings in Managerial Psychology represents a substantial revision of this popular text This edition focuses more than ever on the managing process both within and between organizations and such soft issues as managing creativity and imagination managers' values and beliefs and organizational culture play a larger role than they have before Readings in Managerial Psychology is designed for managers in business and industry students of management public and university administrators and executives in other organizations The collection can be used independently or as a companion volume to Harold J. Leavitt and Homa Bahrami's Managerial Psychology Managing Behavior in Organizations 5th edition 1988 also published by the University of Chicago Press      **The Study of Lives** Robert W. White, 2023-01-13 The Study of Lives reveals for the first time the extent of Henry A. Murray's considerable influence on the study of personality Throughout his long and distinguished career he has either trained or strongly influenced some of the world's leading psychologists eighteen of whom have written fascinating essays for this book The range of topics presented here is as diverse and highly original as Murray's own ideas about personality Everyone concerned with the study of personality will find this book an excellent sampling of the best work being done in the field The study of lives is a phrase Henry A. Murray has often used to describe his own work and it suggests his central conviction that living beings must be studied as living wholes Personality he has repeatedly pointed out is a dynamic process a constantly changing configuration of thoughts feelings and actions occurring in a social environment and continuing throughout life If small parts and short segments of human affairs have to be isolated for detailed scrutiny they must still be understood as parts of a patterned organic system and as segments of a lifelong process This has never meant for him that all research should take the form of collecting life histories although his contributions along this line have been outstanding It implies

simply that isolating fragmenting and learning just a tiny bit about a lot of people tend to carry us away from what is most worth studying The essays in this book are grouped under headings that represent some of Murray s strongest interests His conception of personality as a dynamic process is reflected in Part I which deals with continuities and changes in the course of life His interest in devising procedures suitable for disclosing live feelings fantasies and adaptations and his insistence on the necessity for an adequate taxonomy of carefully discriminated carefully defined variables are represented in the papers of Part II His view that creativity is a central property of human nature has contributed to the reflections and researches that make up Part III Finally his concern with values the great blind spot of traditional science but so obviously a momentous problem for contemporary lives and societies has been taken up in several different ways by the authors of Part IV
