web heating and cooling curves are graphs they plot a substance s temperature y axis against heat x axis for heating curves
we start with a solid and add heat energy for cooling curves we start with the gas phase and remove heat energy cooling and
heating curves have five segments let s study each one by looking at heating ice to

web for water this temperature is 100 c because the boiling point for water is 100 c different substances have different

melting points and boiling points but the shapes of their heating curves are very similar for example this is the heating curve for iron a metal that melts at 1538 c and boils at 2861 c cooling curves
