

# 5 Different Types of Metal Forming Processes

## ROLL FORMING

Continuous operation in which a long strip of metal is passed through a series of pairs of rolls or stands until the desired cross-section profile is obtained.

## BENDING

Metal forming process in which applied forces deform a piece of metal. Once the metal has been bent, it can be planished, or smoothed out.

## EXTRUSION

Metal is forced through a die to create the desired shape. The process can be either hot or cold, depending on the type of metal being worked with.

## FORGING

This process involves shaping metal using localized compressive forces. The blows are delivered with a hammer or a die.

## DEEP DRAWING

Forming process that involves pressing a sheet metal blank into a die to create a three-dimensional shape.

**Material Forming Processes** Anne Marie Habraken,2003 The various contributors to this work cover practical techniques such as injection molding, composites forming, die extrusion, hydro forming, blowing, forging, machining and cutting, super plastic forming, as well as a number of other specific processes. In addition, they write about more theoretical treatments including the advection equation in forming processes, damage modeling, inverse modeling, dedicated to rheology, parameter identification, micro-macro modeling, and no local and gradient models. The diverse materials considered include composites, metals, polymers, and even wood and bones. The chapters have been written by specialists from different scientific disciplines that come from industry and academia, and their contributions have been adapted from the proceedings of the 4th International Conference on Material Forming held in Lihge, Belgium in April 2001.

**Material Forming Processes** Bouchaib Radi,Abdelkhalak El Hami,2016-09-16 Manufacturing industries strive to improve the quality and reliability of their products while simultaneously reducing production costs. To do this, modernized work tools must be produced. This will enable a reduction in the duration of the product development cycle, optimization of product development procedures, and ultimately improvement in the productivity of design and manufacturing phases. Numerical simulations of forming processes are used to this end, and in this book, various methods and models for forming processes including stamping, hydroforming, and additive manufacturing are presented. The theoretical and numerical advances of these processes involving large deformation mechanics on the basis of large transformations are explored, in addition to the various techniques for optimization and calculation of reliability. The advances and techniques within this book will be of interest to professional engineers in the automotive, aerospace, defence, and other industries, as well as graduates and undergraduates in these fields.
