Dong Nyung Lee,2002 Texture is a fundamental material characteristic which results from the microstructural evolution that takes place during various processes including the thermomechanical deformation of materials Therefore texture related phenomena will continue to be of great importance because of their scientific interest as well as their effect upon industrial applications in the 21st century This volume deals with all of the themes which are related to texture phenomena in both conventional and advanced materials including ceramics thin films polymers nanocrystalline materials rocks and composites The papers cover various texture related fields quantitative texture analysis experimental measurement modeling micro texture analysis deformation textures recrystallization and grain growth textures anisotropic properties textures in steels textures in Al and Al Alloys textures in thin films and textures in ceramics intermetallics and polymers etc      **Shared**
