Major is a college level mathematics textbook designed with liberal arts majors in mind. Standard mathematics texts typically mimic the style and tone of those written for STEM track students. This text, while rigorous enough to ensure a high level of mastery over the material, uses practical, entertaining topics presented in a readable, student-centered style to teach mathematics concepts and skills for the non-major. When Are We Ever Going to Use This Stuff emphasizes practical application over symbolic manipulation across several different topics that are ideal for the liberal arts major. Students learn where, when, why, and how the math will help them in their lives. The subject matter includes consumer math, apportionment, statistics, probability, set theory, geometry, right triangle trigonometry, and voting techniques, with the history of mathematics as a consistent motivational thread throughout. Concepts are taught within familiar contexts with a focus on the development of problem-solving skills. When Are We Ever Going to Use This Stuff is a fresh, student-friendly offering for lower division courses that meet the math requirement for liberal arts students.

Priestley,2012-12-06 reason for delaying its study has to do with the question of mathematical maturity No use is made here of trigonometric logarithmic or expo nential functions except in occasional optional material indicating how such functions can be handled A perceptive remark made by George P6lya suggests how we can simultaneously learn mathematics and learn about mathematics i e about the nature of mathematics and how it is developed If the learning of mathematics reflects to any degree the invention of mathematics it must have a place for guessing for plausible inference The reader will find plenty of opportunity here for guessing The early chapters go at a gentle pace and invite the reader to enter into the spirit of

the investigation Exercises asking the reader to make a guess should be taken in this spirit as simply an invitation to speculate about what is the likely truth in a given situation without feeling any pressure to guess correctly Readers will soon realize that a matter about which they are asked to guess will likely be a topic of serious discussion later on **Math 116**
David B. Johnson, Thomas A. Mowry, 2012 MATH 100 , **Mathematics** Thomas J. Miles, Douglas W. Nance, 1997 This text includes a history of math and covers logic computing finance and geometry The numerous exercise and problem sets including writing exercises provide non majors with a thorough foundation of mathematics Optional Road Maps included in the preface provide different ways to organize chapter topics in a coherent fashion and ideas and goals for various approaches to teaching the course This information is expanded upon in the Instructor s Manual **Mathematics for the Liberal Arts Student** Fred Richman, Carol L.
