## **Math Stuff The Elements Of Curriculum Reform:**

*Math Stuff* William N. Bailey, 2000-12 A must read for teachers of mathematics The perennial question When will I ever use this stuff prompts a parent to look deeply into his son's math program In his search for the scope and meaning of stuff he finds that the subject of math is totally unlike any other high school subject Also apparent is that promoted reforms whether politically motivated profit driven or theoretically rooted in educational psychology good or bad generally have a poor long term success rate The semi fictional often humorous style of Math Stuff provides a multi dimensional view of the diverse elements of reform that to be effective must be jointly addressed Taking a cue from a good math teacher the book does not give the answers but rather suggests what to think about while determining them **Shell Tones** William

Bailey, 2005-10-06 Perhaps because of his being a teacher of mathematics and an avid student of cosmology the author has acquired an expectancy of alternatives such as not positive then negative or not rational then irrational all the way to not matter then antimatter not relativity then quantum physics This has led to the what if factor demonstrated in this novel What if to the power a man can hear distinctive sound emanating from paintings in a museum To what end you might ask a hobby of cataloging masterpieces based on tones from one to three But what if to a higher power in the presence of a foreign object the original painting becomes permanently silent as silent as a print or a movie poster What did the painting have that the poster didn't have What then did it lose Is this cause alarm In *Shell Tones* it is **The Future of College Mathematics** A.

Ralston, G. S. Young, 2012-12-06 The Conference Workshop of which these are the proceedings was held from 28 June to 1 July 1982 at Williams College Williamstown MA The meeting was funded in its entirety by the Alfred P Sloan Foundation The conference program and the list of participants follow this introduction The purpose of the conference was to discuss the restructuring of the first two years of college mathematics to provide some balance between the traditional calculus linear algebra sequence and discrete mathematics The remainder of this volume contains arguments both for and against such a change and some ideas as to what a new curriculum might look like A too brief summary of the deliberations at Williams is that while there were and are inevitable differences of opinion on details and nuance at least the attendees at this conference had no doubt that change in the lower division mathematics curriculum is desirable and is coming **Mathematics**

**Education and Subjectivity** Tony Brown, 2011-07-09 This book is centrally concerned with how mathematics education is represented and how we understand mathematical teaching and learning with view to changing them It considers teachers students and researchers It explores their mathematical thinking and the concepts that this thought produces But also how these concepts acquire cultural layers that mediate our apprehension The book examines some of the linguistic and socio cultural filters that influence mathematical understanding But above all it introduces some contemporary theories of human subjectivity in which subjectivity is seen primarily as consequential to rather than productive of our attempts to represent or categorise the world in which we live That is our sense of who we are results from our attempts to see ourselves against the

various versions of the world that we encounter Such theories trouble the very notion of mathematical concepts as apprehended by humans And in foregrounding this concern with subjectivity the book considers mathematics rather differently to styles more familiar in many instances of mathematics education research The book proposes that mathematics can provoke us to think differently about our world and as a result enable our transformative capacities Such an orientation may disturb our understanding of what mathematics is how it exists in an objective sense insofar as mathematical objects can be derived from social filters being applied to the world but also serve as filters on the world capable of producing new social entities
