Abell, James P. Braselton, 2014-08-19 Introductory Differential Equations Fourth Edition offers both narrative explanations and robust sample problems for a first semester course in introductory ordinary differential equations including Laplace transforms and a second course in Fourier series and boundary value problems The book provides the foundations to assist students in learning not only how to read and understand differential equations but also how to read technical material in more advanced texts as they progress through their studies This text is for courses that are typically called Introductory Differential Equations Introductory Partial Differential Equations Applied Mathematics and Fourier Series It follows a traditional approach and includes ancillaries like Differential Equations with Mathematica and or Differential Equations with Maple Because many students need a lot of pencil and paper practice to master the essential concepts the exercise sets are particularly comprehensive with a wide array of exercises ranging from straightforward to challenging There are also new applications and extended projects made relevant to everyday life through the use of examples in a broad range of contexts This book will be of interest to undergraduates in math biology chemistry economics environmental sciences physics computer science and engineering Provides the foundations to assist students in learning how to read and understand the subject but also helps students in learning how to read technical material in more advanced texts as they progress through their studies Exercise sets are particularly comprehensive with a wide range of exercises ranging from straightforward to challenging Includes new applications and extended projects made relevant to everyday life through the use of examples in a broad range of contexts Accessible approach with applied examples and will be good for non math students as well as for undergrad classes Front-End Vision and Multi-Scale Image Analysis Bart M. Haas Romeny, 2003-09-30 Front End Vision and Multi Scale Image Analysis is a tutorial in multi scale methods for computer vision and image processing It builds on the cross fertilization between human visual perception and multi scale computer vision scale space theory and applications The multi scale strategies recognized in the first stages of the human visual system are carefully examined and taken as inspiration for the many geometric methods discussed All chapters are written in Mathematica a spectacular high level language for symbolic and numerical manipulations The book presents a new and effective approach to quickly mastering the

mathematics of computer vision and image analysis The typically short code is given for every topic discussed and invites the reader to spend many fascinating hours playing with computer vision Front End Vision and Multi Scale Image Analysis is intended for undergraduate and graduate students and all with an interest in computer vision medical imaging and human visual perception **The Best Writing on Mathematics 2010** Mircea Pitici,2011-01-02 This anthology also includes a foreword by esteemed mathematician William Thurston and an informative introduction by Mircea Pitici Book Jacket
