Handbook of Organic Photochemistry and Photochemistry Yu-Ran Luo, 2002-12-26 So many compounds so many experiments reported by so many researchers using so many methods Finding reliable data on bond dissociation energies BDEs can be like looking for a needle in a haystack But these data are crucial to work in chemical kinetics free radical chemistry organic thermochemistry and physical organic chemistry so where does one turn With data on almost 2900 bonds in 2500 organic compounds the Handbook of Bond Dissociation Energies in Organic Compounds is the first comprehensive collection of experimental BDE data Author Dr Yu Ran Luo has spent more than 10 years collecting assessing and tabulating BDE experiment results and presents them here in a well organized easy to use series of tables For each compound the tables list up to five recent experimental values indicate which is the recommended value give the method used to determine each value and provide references for each value An outstanding format and complete indexing both by compound name and by compound class make searching for data quick and easy While experimental BDE values carry inherent uncertainties the value of this compilation does not There is simply no other resource that provides as much data With this book when you need data on a particular bond dissociation energy you ll find it within just a few minutes

Free-Radical-Induced DNA Damage and Its Repair Clemens Sonntag, 2006-03-20 The free radical chemistry of DNA had been discussed in some detail in 1987 in my book The Chemical Basis of Radiation Biology Obviously the more recent developments and the concomitant higher level of understanding of mechanistic details are missing Moreover in the living cell free radical DNA damage is not only induced by ionizing radiation but free radical induced DNA damage is a much more general phenomenon It was therefore felt that it is now timely to review our present knowledge of free radical induced DNA damage induced by all conceivable free radical generating sources Originally it had been thought to include also a very important aspect the repair of DNA damage by the cell s various repair enzymes Kevin Prise Cancer Campaign Gray Laboratory London was so kind to agree to write this part However an adequate description of this strongly expanding area would have exceeded the allocated space by much and this section had to be omitted The directors of the Max Planck Institut f r Strahlenchemie now MPI f r Bioanorganische Chemie Karl Wieghardt and Wolfgang Lubitz kindly allowed me to continue to use its facilities after my retirement in 2001 Notably our brarian Mrs Jutta Theurich and her right hand help Mrs Rosemarie Schr er were most helpful in getting hold of the literature I thank them very much Without their constant help this would have been very difficult indeed
