Applied Land Informatics Toru Otawa, 2004. Geographic information systems (GIS) have been implemented in a variety of organizations around the world and are increasingly used as a spatial decision making tool by a wide range of disciplines. This diffusion of GIS has been driven primarily by advancements in GIS related technologies such as hardware and software. While introducing GIS, very few organizations have scrutinized the socio cultural infrastructure of an organization such as data and user needs. This black box approach to GIS implementation has often led to disappointing outcomes contrary to organization's initial expectations. This book is based on the author's inexhaustible motive to help maximize the benefits from GIS in corporate settings by understanding better and sound GIS design that meets organizational missions, goals and needs. This study is a compilation of the land information research undertaken during the 1990s. A model was conceptualized and applied to local organizations to help evaluate the implementation of organization wide or corporate geospatial information systems. GIS over time. A questionnaire was developed to assess values and perceptions associated with the model components. The evaluation. GIS-GPS Sources Ralph O. Heatly, 1995.
