Building Clustered Linux Systems Robert W. Lucke, 2004 Praise for Building Clustered Linux Systems The author does an outstanding job of presenting a very complicated subject I very much commend this work The author sets the pace and provides vital resources and tips along the way He also has a very good sense of humor that is crafted in the text in such a way that makes the reading enjoyable just when the subject may demand a break This book should be a requirement for those that are clustering or considering clustering and especially those considering investing a great deal of financial resource toward that goal Joe Brazeal Information Technician III Southwest Power Pool This book is for Beginner and Intermediate level system administrators engineers and researchers who want to learn how to build Linux clusters The book covers everything very well Ibrahim Haddad Senior Researcher Ericsson Corporate Unit of Research Nothing that I know of exists yet that covers this subject in as much depth and detail The practical hands on approach of this book on how to build a Linux cluster makes this a very valuable reference for a very popular highly demanded technology George Vish II Linux Curriculum Program Manager and Senior Education Consultant HP In my opinion there is a significant lack of literature on this subject Most of the currently available books are either dated or do not address the complete picture of the range of decisions that must go into building a Linux cluster I feel comfortable recommending this to anyone interested in building a Linux cluster to better understand both the technical aspects of building and designing a Linux cluster but also the business aspects of the same Randall Splinter Ph D Senior Solution Architect HP The author has set a precedent in the cluster design and integration process that is lacking in the industry today Stephen Gray Senior Applications Engineer Altair Engineering Incorporated The Practical Step by Step Guide to Building and Running Linux Clusters Low cost high performance Linux clusters are the best solution for an increasingly wide range of technical and business problems Until now however building and managing Linux clusters has required more specialized knowledge than most IT organizations possess This book dramatically lowers the learning curve bringing together all the hands on knowledge and step by step techniques you'll need to get the job done Using practical examples Robert Lucke simplifies ever *IBM Power 520 Technical Overview* Scott Vetter, Giuliano Anselmi, YoungHoon Cho, Jim Cook, Gregor Linzmeier, Marcos Quezada, John T Schmidt, Guido Somers, IBM Redbooks, 2010-04-02 This IBM Redpaper publication is a comprehensive guide covering the IBM Power 520 server machine type model 8203 E4A The goal of this paper is to introduce this innovative server that includes IBM System i and IBM System p and new hardware technologies The major hardware offerings include The POWER6 processor available at frequencies of 4.2 GHz and 4.7 GHz Specialized POWER6 DDR2 memory that provides greater bandwidth capacity and reliability The 1 Gb or 10 Gb Integrated Virtual Ethernet adapter that brings native hardware virtualization to this server EnergyScale technology that provides features such as power trending power saving capping of power and thermal measurement PowerVM virtualization technology Mainframe continuous availability brought to the entry server environment This Redpaper expands

Grid and cooperative computing has emerged as a new frontier of information technology. It aims to share and coordinate distributed and heterogeneous network resources for better performance and functionality that can otherwise not be achieved. This volume contains the papers presented at the 2nd International Workshop on Grid and Cooperative Computing (GCC 2003) which was held in Shanghai P.R. China during December 7-10 2003. GCC is designed to serve as a forum to present current and future work as well as to exchange research ideas among researchers, developers, practitioners and users in Grid computing, Web services and cooperative computing, including theory and applications. For this workshop we received over 550 paper submissions from 22 countries and regions. All the papers were peer reviewed in depth and qualitatively graded on their relevance, originality, significance, presentation and the overall appropriateness of their acceptance. Any concerns raised were discussed by the program committee. The organizing committee selected 176 papers for conference presentation (full papers) and 173 submissions for poster presentation (short papers). The papers included herein represent the forefront of research from China, USA, UK, Canada, Switzerland, Japan, Australia, India, Korea, Singapore, Brazil, Norway, Greece, Iran, Turkey, Oman, Pakistan and other countries. More than 600 attendees participated in the technical section and the exhibition of the workshop. [IBM Power 550 Technical Overview](#)
