Nurse Patient Communication:

Nurse-patient Communication Garland K. Lewis, 1969 **Improving Nurse-patient Communication Using the Teach-back Method** Sheila R. Smallwood, 2018 Effective nursing communication considers health literacy the person's ability to understand and make health decisions based on the information given. Health professionals often overestimate the health literacy of patients thereby affecting patient outcomes. In a hospital environment, patients rate the ability of the nurse to explain things in a way patients understand by completing the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) after discharge. The HCAHPS results are converted to a score which is used in a formula to determine hospital reimbursement; the lower the score, the lower the reimbursement. The purpose of this project was to improve nurse communication skills and facilitate patient understanding of care. A literature review revealed the teach back method as a best practice strategy. Teach back is a communication technique designed to improve patient understanding about what was said by healthcare providers. Teach back is a way of presenting information then asking patients to repeat what was said in their own words. An education module designed to improve nurse communication skills was implemented on a 14-bed hospitalist medical unit for the registered nurse staff. N=13. The education included content on health literacy and the teach back method of communication. Nursing staff was surveyed before (61.5% response rate) and six weeks following (50% response rate) the educational offering using the Health Professionals Communication Skills Scale (HP-CSS), an 18-item tool measuring empathy, informative communication, respect, and social skills. In addition, patient responses to the HCAHPS question, "the nurse explained things in a way you could understand," were compared before and after the educational offering. Overall, the post-survey responses were lower than the pre-survey responses in each domain, indicating a decreased perception of communication by the nursing staff. The aggregate mean score for informative communication decreased from 5.01 to 4.83 (p=0.37) and social skills decreased from 3.85 to 3.75 (p=0.87) on the post-survey with significant aggregate mean score decreases for respect (5.46 to 4.76, p=0.001). *Communication for Nurses: Talking with Patients* Lisa Kennedy Sheldon, 2009-10-07. *Communication for Nurses* offers valuable techniques delivered in a concise, user-friendly format that encourages reader's development of a personal professional communication style. Topics include effective communication in difficult situations, the nurse-patient relationship, working with different patient groups and families, and communicating with other healthcare providers. Patient-Provider Communications: Caring to Listen Valerie A. Hart, 2010-10-25. *Patient-Provider Communications: Caring to Listen* offers specific patient communication for advanced practice nurses. Role plays for different clinical situations with varying patient populations provide a bridge for implementing communication strategies in the clinical setting. Each chapter gives a brief synopsis of current communication theories that relate to the topic and which drive communication strategies with patients. Communication and Journaling exercises are included at the end of each chapter. Accompanied by
