Nutritional Factors in General Medicine Mark D. Altschule, 1978 *Influence of Dietary Factors, Nutrients, and the Gut-Lung Axis on Respiratory Health* Tomoko Suzuki, Naser Alsharairi, Inês Brandão, 2025-02-21 Dietary habits and nutrients are gaining increasing recognition as modifiable factors influencing respiratory health Food components including vitamins minerals fatty acids and bioactive compounds like flavonoids through their antioxidant and anti inflammatory properties have been associated with ameliorated lung function and attenuated viral infections To illustrate this multiple studies show that the Mediterranean diet known for its emphasis on fruits vegetables whole grains and olive oil has a beneficial effect on respiratory health Furthermore the dynamic interplay between diet and lungs appears to revolve around the immune system making immune interactions a central topic of discussion The substantial influence of the gut microbiota becomes evident when considering that approximately 70 80% of immune cells reside in the gut Hence the gut microbiota emerges as a crucial mediator of the impact of food on health including respiratory health Gut dysbiosis is believed to be associated with the etiology of respiratory lung diseases such as asthma COPD chronic bronchitis emphysema and lung cancer Microbiota derived metabolites such as short chain fatty acids SCFAs produced from the fermentation of non digestible carbohydrates have been reported to regulate gut inflammation Probiotics SCFAs bioactive compounds and dietary fiber as well as restricted dietary patterns have been shown to reduce gut inflammation and play a protective role in respiratory diseases However the exact mechanisms underlying these processes are still to be unravelled *Oxford Textbook of Primary Medical Care* Roger Jones (Prof.), 2005 *American Medicine* , 1903 *The American journal of clinical nutrition* , 1954

Molecular Structure and Function of the Tight Junction Michael Fromm, Jörg-Dieter Schulzke, 2009-06-22. Aim of this volume is to clarify the relationship between molecular structure and function of tight junction proteins as well as their regulation and their role in diseases. Current research may form a basis for future diagnostic and therapeutic approaches to diseases which seem to have not much in common but are characterized by defects of organ barriers like Crohn's disease renal hypertension inner ear deafness and cancerous diseases. Topics include the functions of distinct tight junction proteins as barrier or channel formers for solutes and water characteristics of the tight junction in inflammatory bowel diseases posttranslational modifications of tight junction proteins the relation between renal tight junction proteins and blood pressure control and the molecular structure of claudin claudin interactions.
