# Managing End User Computing in the Company

This slide represents how we will manage to end user computing and it includes to adopt centralized application deployment, preparation for changing job roles, know users and so on

Centralize Application Deployment

- We have large number of apps operating and all application code will be stored on application servers, either in the data center or in the cloud, so that it can be delivered up to user sessions on devices at any time and from any location
- Add Text Here

Prepare for Changing Job Roles

- By analyzing application usage patterns and the interrelationships between apps and user groups, the organization will be able to architect which app should be moved when
- Users will be classified based on the apps they use, the data they access, or the department to which they belong – or a combination of these criteria

Know Users

- To evaluate application use and establish the importance of each application to the constituent user base and transitioning to EUC settings might be difficult for many users as they discover how apps work on different EUC platforms
- Add Text Here

Shake Out the Bugs First

- Testing is crucial to the success of any big endeavor and metrics for testing should concentrate on application performance, overall end-user experience, server and storage consumption, and security implications
- Add Text Here

Prepare for All-EUC Ahead

- Pandemic's termination will not spell the end of EUC and many businesses are weighing the benefits of EUC and have concluded that it will be the default computing paradigm in the near future as critical assets, data, and apps are all housed in the business, EUC is naturally more secure, and the flexibility to utilize any device, anywhere is beneficial to productivity and user happiness
