

1) Numerical Methods (Introduction):

- Methods for solving problems using computers. Given a mathematical problem, there are 2 ways to get the solution to the problem:
Analytical Methods and Numerical Methods

Analytical Methods:

- What has been taught before: $ax^2 + bx + c = 0 \rightarrow x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$
- Gives a solution in closed form. However, in most problems, the analytical methods are not known. For example, solve the following for x : $\sin x - x^3 = 0$

Numerical Methods:

- Using computer to generate "approximate" solution to the required precision
- Numerical solution to a problem is quite different from the analytical solution. As an example, consider the problem:

$$\frac{d^2y}{dx^2} + 4y = 0 \quad , \quad y(0) = 1 \quad , \quad y''(\pi) = 2$$

- Analytical Solution: $y(t) = \sin 2t + \cos 2t$
- Any value of t would determine the value of $y(t)$
- On the other hand, numerical method gives $y(t)$ at specific values of t , for example:

$$y(0.1) = 1.1787 \quad , \quad y(0.2) = 1.3105 \quad , \quad y(0.3) = 1.3900 \quad \dots$$

- Note that these values are only approximations of the true values given by (1)

1.2) Sources of Errors

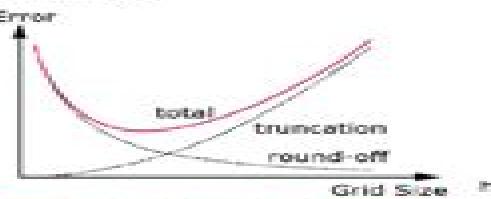

- **Truncation Error:** When a limiting process is truncated before one has reached the limiting value.

Infinite Series Example: $\sin x = x - \frac{x^3}{3!} + \frac{x^5}{5!} + \frac{x^7}{7!} + \frac{x^9}{9!} + \dots$ is truncated to give the approximation: $\sin x \approx x - \frac{x^3}{3!} + \frac{x^5}{5!}$

Taylor Series Example: $y(x+h) = y(x) + h y'(x) + \frac{h^2}{2!} y''(x) + \dots$ is truncated to give the approximation:
 $y(x+h) \approx y(x) + h y'(x)$

Here, the truncation error decreases with decreasing step size, h .

- **Round-off Error:** Limited accuracy of the calculator/computer used to perform the numerical calculations. Can be reduced by using higher precision. Decreasing step size, h results in larger number of arithmetic operations, and hence higher roundoff error accumulated.

1.3) Absolute & Relative Errors

- Let \tilde{a} be an approximate value of the exact value a .
- The absolute error in \tilde{a} : $\epsilon = a - \tilde{a}$
- The relative error in \tilde{a} : $r = \frac{\epsilon}{a} = \frac{a - \tilde{a}}{a}$
- (Often Used) A number which is correct to n decimal places has an absolute error: $|\epsilon| < 0.5 \times 10^{-n}$
- A number which is correct to n significant digits has a relative error: $|r| < 0.5 \times 10^{-n}$

Example 1:

- Consider $a = \frac{1}{3}$ and $\tilde{a} = 0.333$. Clearly, \tilde{a} is correct to 3 decimal places and 3 significant digits.

science can loosely be defined as the endeavor to develop and analyse models for the simulation and control of complex processes. This is achieved by making optimal use of computer resources and by drawing upon a variety of disciplines, techniques and theories. With the emergence of advanced computational and information technologies, computational science now has a significant impact on engineering, physical, biological, management and social sciences. The contributions in this state-of-the-art volume range from theoretical and numerical topics to practical implementations. The subject matter includes: modelling, mathematical and numerical analysis, differential equations, linear algebra, optimization, domain decomposition, computational fluid dynamics, computational mechanics, elasticity, structure, computational physics and chemistry, electromagnetic control theory and other applications. This volume is dedicated to Roland Glowinski on the occasion of his 60th birthday. It is aimed at the next generation of scientists, applied mathematicians, computer scientists, practitioners and engineers who will define computational science within the context of the challenging scientific, industrial, economic and societal problems of the 21st century.
