

# CHPTER 11: Colorimetry CHP: It's All About the Light

Colorimetry is the science of color measurement. It is the process of quantifying the color of an object by measuring the amount of light it reflects or transmits. The colorimetric process involves the measurement of the spectral power distribution of the light source, the spectral power distribution of the object, and the spectral power distribution of the observer's eye. The colorimetric process is used to determine the color of an object, to compare the color of two objects, and to predict the color of an object under different lighting conditions.

Colorimetry is a complex process that requires a deep understanding of the physics of light, the properties of color, and the psychology of color perception. It is a process that requires a great deal of precision and accuracy, and it is a process that is used in a wide variety of applications, from the design of clothing and cosmetics to the design of buildings and vehicles.
