Optimal Interprocedural Program Optimization Jens Knoop,1993 **Optimal Interprocedural Program Optimization** Jens Knoop,1998-09-23 Starting from the intraprocedural basic case this monograph focuses on interprocedural optimization It emphasizes the analogies and essential differences between intraprocedural and interprocedural optimization and offers cookbook style support for constructing the underlying algorithms It is aimed at compiler constructors and researchers interested in the systematic transfer of intraprocedural optimizations to the interprocedural setting as well as students seeking a gentle introduction to the field **Tools and Algorithms for the Construction of Analysis of Systems** W. Rance Cleaveland,1999-03-10 ETAPS 99 is the second instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprises ve conferences FOSSACS FASE ESOP CC TACAS four satellite workshops CMCS AS WAGA CoFI seven invited lectures two invited tutorials and six contributed tutorials The events that comprise ETAPS address various aspects of the system velopment process including speci cation design implementation analysis and improvement The languages methodologies and tools which support these tivities are all well within its scope Dieren t blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Foundations of Software Science and Computation Structures Wolfgang Thomas,2003-07-31 This book constitutes the refereed proceedings of the Second International Conference on Foundations of Software Science and Computation Structures FOSSACS 99 held in Amsterdam The Netherlands in March 1999 as part of ETAPS 99 The 18 revised full papers presented were carefully selected from a total of 40 submissions Also included are three invited papers The central issues of the papers are theories and methods which suport the specification transformation verification and analysis of programs and software systems **Compiler Design** Helmut Seidl,Reinhard Wilhelm,Sebastian Hack,2012-08-13 While compilers for high level programming languages are large complex software systems they have particular characteristics that differentiate them from other software systems Their functionality is almost completely well defined ideally there exist complete precise descriptions of the source and target languages Additional descriptions of the interfaces to the operating system programming system and programming environment and to other compilers and libraries are often available The book deals with the optimization phase of compilers In this phase programs are transformed in order to increase their efficiency To preserve the semantics of the programs in these transformations the compiler has to meet the associated applicability conditions These are checked using static analysis of the programs In this book the authors systematically describe the analysis and transformation of imperative and functional programs In addition to a detailed description of important

efficiency improving transformations the book offers a concise introduction to the necessary concepts and methods namely to operational semantics lattices and fixed point algorithms This book is intended for students of computer science The book is supported throughout with examples exercises and program fragments Euro-Par' 99 Parallel Processing Patrick Amestoy,Philippe Berger,Michel Dayde,Iain Duff,Valerie Frayssse,Luc Giraud,Daniel Ruiz,2003-05-21 Euro
