An Optimization Primer Johannes O. Royset, Roger J-B Wets, 2022-03-28 This richly illustrated book introduces the subject of optimization to a broad audience with a balanced treatment of theory models and algorithms Through numerous examples from statistical learning operations research engineering finance and economics the text explains how to formulate and justify models while accounting for real world considerations such as data uncertainty It goes beyond the classical topics of linear nonlinear and convex programming and deals with nonconvex and nonsmooth problems as well as games generalized equations and stochastic optimization The book teaches theoretical aspects in the context of concrete problems which makes it an accessible onramp to variational analysis integral functions and approximation theory More than 100 exercises and 200 fully developed examples illustrate the application of the concepts Readers should have some foundation in differential calculus and linear algebra Exposure to real analysis would be helpful but is not prerequisite **An**

Nazareth, 2004-05-15 This book introduces a general audience to the main facets of optimization Very little mathematical background is assumed It should appeal to students teachers and a general audience interested in how optimization affects their everyday life such as people in business *A Mathematical Primer on Linear Optimization* Diogo Gomes, Amílcar

Sernadas, Cristina Sernadas, 2019-09-02 The book provides a self contained mathematical introduction to linear optimization for undergraduate students of Mathematics This book is equally suitable for Science Engineering and Economics students who are interested in gaining a deeper understanding of the mathematical aspects of the subject The linear optimization problem is analyzed from different perspectives topological algebraic geometrical logical and algorithmic Nevertheless no previous knowledge of these subjects is required The essential details are always provided in a special section at the end of each chapter The technical material is illustrated with multiple examples problems with fully worked solutions and a range of proposed exercises In Chapter 1 several formulations of the linear optimization problem are presented and related concerning admissible vectors and optimizers Then sufficient conditions for the existence of optimizers based on topological techniques are discussed in Chapter 2 The main objective of Chapter 3 is to provide a way for deciding whether or not an admissible vector is an optimizer relying on Farkas Lemma In Chapter 4 linear algebra is used for computing optimizers via basic admissible vectors A geometrical characterization of these vectors is the goal of Chapter 5 Duality is discussed in Chapter 6 giving yet a new technique for finding optimizers An introduction to computational complexity is presented in Chapter 7 with the aim to analyze the efficiency of linear optimization algorithms The complexity of a brute force algorithm is shown not to be polynomial Chapter 8 is targeted at the Simplex Algorithm It includes the proof of its soundness and

completeness and an explanation on its non polynomial complexity Finally Chapter 9 concentrates on the integer optimization problem with an emphasis on totally unimodularity An algorithm based on the Branch and Bound Technique is analyzed
