**Models for Production Planning in a Supply Chain** Stefan Voss, David L. Woodruff, 2003 The book begins with an easy to read introduction to the concepts associated with the creation of optimization models for production planning These concepts are then applied to well known planning models namely mrp and MRP II From this foundation fairly sophisticated models for supply chain management are developed Another unique feature is that models are developed with an eye toward implementation In fact there is a chapter that provides explicit examples of implementation of the basic models using a variety of popular commercially available modeling languages *Pacific Conference on Manufacturing*, 2000

*Supply Chain Management with APO* Jörg Thomas Dickersbach, 2004 The Advanced Planner and Optimizer APO is the software from SAP dedicated to supply chain management. This book addresses the question how to implement APO in a company. It is written from a long years experience in implementation projects and aims to provide project managers and team members with the necessary know how for a successful implementation project. The focus of the book lies in introducing modelling approaches and explaining the structure and interdependencies of systems modules and entities of APO. Another concern is the integration with the R/3 system s both technically and from a process point of view. Since APO projects differ significantly from other SAP projects some key issues and common mistakes concerning project management are pointed out as well.
