*Observation of the Earth System from Space* Jakob Flury,Reiner Rummel,Christoph Reigber,Markus Rothacher,Gerd Boedecker,Ulrich Schreiber,2006-02-28 In the recent years space based observation methods have led to a substantially improved understanding of Earth system Geodesy and geophysics are contributing to this development by measuring the temporal and spatial variations of the Earth's shape gravity field and magnetic field as well as at sphere density In the frame of the German R D programme GEOTECHNOLOGIEN research projects have been launched in 2002 related to the satellite missions CHAMP GRACE and ESA's planned mission GOCE to complementary terrestrial and airborne sensor systems and to consistent and stable high precision global reference systems for satellite and other techniques In the initial 3 year phase of the research programme 2002-2004 new gravity field models have been computed from CHAMP and GRACE data which outperform previous models in accuracy by up to two orders of magnitude for the long and medium wavelengths A special highlight is the termination of seasonal gravity variations caused by changes in continental water masses For GOCE to be launched in 2006 new gravity field analysis methods are under development and integrated into the ESA processing system 2000 GPS radio occultation profiles observed by CHAMP have been processed on an operational basis They represent new and excellent information on atmospheric refractivity temperature and water vapor These new developments require geodetic space techniques such as VLBI SLR LLR GPS to be combined and synchronized as if being one global instrument
