**Organizational Cognition** Davide Secchi, Rasmus Gahrn-Andersen, Stephen J. Cowley, 2022-09-30 Cognition is usually

associated with brain activity Undoubtedly some brain activity is necessary for it to function However the last thirty years have revolutionized the way we intend and think about cognition These developments allow us to think of cognition as distributed in the sense that it needs tools artifacts objects and other external entities to allow the brain to operate properly **Organizational Cognition** The Theory of Social Organizing takes this perspective and applies it to the organization by introducing a model that defines the elements that allow cognition to work This model shows that cognition needs the combined and simultaneous presence of micro aspects i e the biological individual and macro super structural elements e g organizational climate culture norms values rules These two become practice of cognition as they materialize in a meso domain this is any action that allows individuals to perform their daily duties Due to the micro meso macro interactions this has been called the 3M Model Most of what happens in the meso domain relates to exchanges between two or more people i e it is a social activity This is usually mentioned in the perspectives above but it is rarely explored By bringing meso activities to the center of cognition the book develops and presents the Theory of Social Organizing Not only this is useful to organizational scholars but it also opens a new path for cognition research

**Tacit Knowledge in Organizations** Philippe Baumard,1999-07-26 Philippe Baumard has observed that strategic success seems to lie more in top managers ability to use tacit knowledge than in their gaining or updating explicit knowledge William H Starbuck New York University This important new book effectively illustrates how in conditions of ambiguity managers over manage i e rely too much on explicit plans and interpretations Here Philippe Baumard develops an alternative analysis and with it a new approach to management Frank Blackler Lancaster University This landmark book delves below the surface of organizations in order to understand the complex processes of top managers decision making Philippe Baumard argues that the conventional rational model of decision making ignores the tacit and intuitive processes that are often crucial in successful business outcomes He demonstrates through his four central business cases how it is in times of uncertainty rapid change and turbulence that the fate of companies is often determined and it is at these times that managers tacit knowledge and their ability to navigate ambiguous and complex situations is most critical

**The Relational View of Economics** Lucio Biggiero,Derick de Jongh,Birger Priddat,Josef Wieland,Adrian Zicari,Dominik Fischer,2022-02-02 This book contributes to the development of a relational view of economics Bringing together experts from various disciplines it offers an interdisciplinary perspective on the study of relational transactions In contrast to discrete market transactions as a traditional subject of economic discourse the book analyses the role of relational transactions in the study of economic phenomena The contributing authors address topics such as global intra and inter company networks intersectoral stakeholder management relational contracts and transcultural management approaches Accordingly the book makes an important contribution to an emerging field of research

**New Horizons in Research on Sustainable Organisations** Mark Starik,Sanjay Sharma,Carolyn Egri,Rick Bunch,2017-10-24 Environmental sustainability practice and research have advanced over the past decade from novelty to

near mainstream status today During this environmentally critical time period sustainability practitioner techniques such as environmental energy and social auditing other sustainability information and related systems and a wide variety of environmental sustainability approaches have been developed improved and institutionalised advancing both the practice and research of environmental sustainability management and policy However academics and practitioners in the sustainability field still have widely differing perspectives on what a sustainable organisation is or might be but seldom take the opportunity to share these respective sustainability visions let alone the multiple ways to achieve them New Horizons in Research on Sustainable Organisations is intended to bridge this gap between academics and practitioners with cutting edge research from both groups on progress towards sustainability After working on sustainability related projects involving other academics both research and practitioner oriented graduate students consultants managers and activists the lead co editors of this volume saw the need to encourage information exchanges among differing networks of sustainability stakeholders to create a pathway for researchers and practitioners in the general area of organisations and the natural environment to address issues of common interest There are many networks in the general subject area but the cross pollination of ideas between academics and practitioners remains sketchy New Horizons in Research on Sustainable Organisations is intended to present and encourage such cross pollination The chapters in this volume are presented in three subsets generally proceeding from the most macro to the most micro in terms of perspective and applicability However this arbitrary division belies the integration from macro through meso or mid range to micro levels that is apparent in these studies Macro approaches typically include wider geographic scopes greater numbers of stakeholders and more complex explanatory factors than micro approaches Each chapter adopts one or more particular sustainability world view and then grounds these and the other chapter elements within actual organisations Therefore the reader is advised to envision not a one dimensional continuum but rather a circle in which the macro view both feeds back and feeds forward to the micro view This volume addresses a number of intriguing and important sustainable organisation phenomena such as multiple sustainable development perspectives changing environmental politics environmental management systems variations voluntary environmental programme performance complex adaptive systems and environmental technology development Additionally several models are suggested such as cultivation capabilities and business ecology frameworks Nonlinear Dynamics, Complexity and Public Policy Euel W. Elliott,L. Douglas Kiel,1999 Introduces those with an interest in the policy sciences to the field of non linear dynamics and complex systems and their applications to problems of public policy Four of the nine contributions concentrate on the implications of nonlinear dynamics and complexity for understanding the evolution of economic systems or instruments of economic policymaking Three papers explore a set of non economic related policy areas involving dynamics at a reduced level of aggregations from macroeconomic phenomena The final contributions consider information technology and the challenge of time The Nonprofit Management Handbook Tracy D.
