Optimierung Und Approximation:

Introduction to the Theory of Nonlinear Optimization Johannes Jahn, 2020-07-02 This book serves as an introductory text to optimization theory in normed spaces and covers all areas of nonlinear optimization. It presents fundamentals with particular emphasis on the application to problems in the calculus of variations, approximation and optimal control theory. The reader is expected to have a basic knowledge of linear functional analysis. Optimization in Function Spaces with Stability Considerations in Orlicz Spaces Peter Kosmol, Dieter Müller-Wichards, 2011 This is an essentially self-contained book on the theory of convex functions and convex optimization in Banach spaces with a special interest in Orlicz spaces. Approximate algorithms based on the stability principles and the solution of the corresponding nonlinear equations are developed in this text. A synopsis of the geometry of Banach spaces, aspects of stability and the duality of different levels of differentiability and convexity is developed. A particular emphasis is placed on the geometrical aspects of strong solvability of a convex optimization problem; it turns out that this property is equivalent to local uniform convexity of the corresponding convex function. This treatise also provides a novel approach to the fundamental theorems of Variational Calculus based on the principle of pointwise minimization of the Lagrangian on the one hand and convexification by quadratic supplements using the classical Legendre-Riccati equation on the other. The reader should be familiar with the concepts of mathematical analysis and linear algebra. Some awareness of the principles of measure theory will turn out to be helpful. The book is suitable for students of the second half of undergraduate studies and it provides a rich set of material for a master course on linear and nonlinear functional analysis. Additionally, it offers novel aspects at the advanced level. From the contents: Approximation and Polya Algorithms in Orlicz Spaces, Convex Sets and Convex Functions, Numerical Treatment of Nonlinear Equations and Optimization Problems, Stability and Two-stage Optimization Problems, Orlicz Spaces, Orlicz Norm and Duality, Differentiability and Convexity in Orlicz Spaces, Variational Calculus. **Recent Advances in Optimization** Peter Gritzmann, Reiner Horst, Ekkehard Sachs, Rainer Tichatschke, 2012-12-06 This book presents recent theoretical and practical aspects in the field of optimization and convex analysis. The topics covered in this volume include: Equilibrium models in economics, Control theory and semi-infinite programming, Ill-posed variational problems, Global optimization, Variational methods in image restoration, Nonsmooth optimization, Duality theory in convex and nonconvex optimization, Methods for large-scale problems.
