Optical Systems Design and Optimization ,2006 Victorian Glassworlds Isobel Armstrong,2008-04-24 Isobel

Armstrong's startlingly original and beautifully illustrated book tells the stories that spring from the mass production of glass in nineteenth century England. Moving across technology, industry, local history, architecture, literature, print culture, the visual arts, optics and philosophy, it will transform our understanding of the Victorian period. The mass production of glass in the nineteenth century transformed an ancient material into a modern one at the same time transforming the environment and the nineteenth century imagination. It created a new glass culture hitherto inconceivable. Glass culture constituted Victorian modernity. It was made from infinite variations of the prefabricated glass panel and the lens. The mirror and the window became its formative elements, both the texts and constituents of glass culture. The glassworlds of the century are heterogeneous. They manifest themselves in the technologies of the factory furnace, in the myths of Cinderella and her glass slipper, circulated in print media, in the ideologies of the conservatory as building type, in the fantasia of the shopfront, in the production of chandeliers in the Crystal Palace, and the lens made images of the magic lantern and microscope. But they were nevertheless governed by two inescapable conditions. First, to look through glass was to look through the residues of the breath of an unknown artisan, because glass was mass produced by incorporating glassblowing into the division of labour. Second, literally a new medium, glass brought the ambiguity of transparency and the problems of mediation into the everyday. It intervened between seer and seen, incorporating a modern philosophical problem into bodily experience. Thus for poets and novelists, glass took on material and ontological, political and aesthetic meanings. Reading glass forwards into Bauhaus modernism, Walter Benjamin overlooked an early phase of glass culture where the languages of glass are different. The book charts this phase in three parts. Factory archives, trade union records and periodicals document the individual manufacturers and artisans who founded glass culture; the industrial tourists who described it; and the systematic politics of window-breaking. Part Two, culminating in glass under glass at the Crystal Palace, reads the glassing of the environment, including the mirror, the window and controversy round the conservatory and their inscription in poems and novels. Part Three explores the lens, from optical toys to philosophical instruments: as the telescope and microscope were known. A meditation on its history and phenomenology, Victorian Glassworlds is a poetics of glass for nineteenth century modernity. think of a university they usually think of a distinctive place rather than about say the teaching or the research that might go on there This is understandable both because universities usually stay rooted to the same spot over the centuries and because their physical forms may send powerful messages about the kind of places they are The physical form of the university and how the spaces within it become transformed by their users into places which hold meanings for them has become of increased interest recently from both academic and institutional management perspectives when trying to understand more about how universities work and how they may be made more effective Yet despite its seemingly obvious importance the available literature on space and place in higher education internationally is scant when compared to that dealing with say teaching and learning methods or with evaluating quality or many other topics This book brings together a range of academic and professional perspectives on university spaces and places and show how technical matters of building design maintenance and use interact with academic considerations on the goals of the university Space issues are located at an intellectual crossroads where widely differing conceptual and professional perspectives meet and need to be integrated and this important book brings together perspectives from around the world to show design and use issues are changing Higher Education Globally higher education is being required to do more things to teach more students to be better at research to engage more with business and communities and many other things These pressures are leading universities to reconsider their management processes as well as their academic structures an often quoted saying is that we make our buildings and afterwards they make us At a time when universities and colleges are seeking competitive advantages ideas and analysis about space design and use is much needed and will be well received The Reticule and Pocket Companion, Or, Miniature Lexicon of the English Language Lyman Cobb,1867 **An universal etymological English dictionary** Nathan Bailey,1724 **An Universal Etymological English Dictionary, Etc.]** Nathan BAILEY,1724 *Opricks Melinda Wentzell,1974 **An Universal Etymological English Dictionary Comprehending the Derivations of the Generality of Words in the English Tongue, ... and Also a Brief and Clear Explication of All Difficult Words Derived from Any of the Aforefaid Languages; ...
