Grunwald, 1988 *Pictorial Communication In Real And Virtual Environments* Stephen Ellis, 1991-06-04 Advances in the quality and accessibility of computer graphics has provided new pictorial displays and the tools with which to control them These new display technologies have focused interest on how to design the static and dynamic images they produce to ensure effective communication This book based on

the conference on Spatial Displays and Spatial instruments held at the Asilomar Conference Centre in 1987 focuses on the geometry of this communication. It is intended to be a source book of theoretical analysis, experimental demonstrations and practical examples from a range of contributors interested in pictorial communication from medical artists to astronauts. The book offers the theoretical background and practical guidance needed by designers of contemporary 2D and 3D graphical computer interfaces. Its major contribution lies in its outlining of the elements of human perception and motor control which underlie the geometric design of head mounted graphics for virtual reality displays.

A Manual Method for Orbital Rendezvous and an Elliptical Relative Coordinate System for Rendezvous Navigation and Guidance Mitchell E. Timin, 1970

Human Missions to Mars Donald Rapp, 2007-10-24 In *Human Missions to Mars* Donald Rapp looks at human missions to Mars from an engineering perspective. He begins by describing the pros and cons of robotic exploration versus human exploration and then examines the ideas for sending humans to Mars from the point of view of both the enthusiast and the skeptic. Chapter 2 describes how space missions are planned and how they may be achieved as a sequence of separate steps. Chapter 3 deals with the complex issues relating to the outward journey to Mars and the return leg. The author deals with propulsion systems and with the analysis of the various trajectories which may be utilized for such a mission. He divides mission into a number of stages: Earth's surface to low Earth orbit (LEO), departing from LEO, Mars orbit insertion and landing, ascent from Mars, trans Earth injection from Mars orbit and Earth orbit insertion and landing. Chapter 4 discusses a wide range of elements critical to a human Mars mission including life support, consumables, radiation effects and shielding, microgravity effects, abort options and mission safety. Possible habitats on the Martian surface and aero-assisted orbit insertion and entry, decent and landing. For any human mission to the Red Planet, the possible utilization of any resources indigenous to Mars would be of great value and such possibilities are discussed in Chapter 5. The use of indigenous resources on the Moon is described as a precursor to the availability of similar resources on Mars and issues such as fuelling Mars bound craft from lunar resources, the use of lunar ferries, staging, assembly and refueling in near Earth space are all discussed. The important applications arising from the transportation of hydrogen to Mars are also described. Chapter 6 deals with a range of previous Mars mission studies and the technologies they employed. Chapter 7 looks at how NASA is planning for its return to the Moon and the use of the Moon as a stepping stone to Mars. Chapter 8 presents the author's detailed analysis of why, in his opinion, the current NASA approach will fail to send humans to Mars before 2080. The book concludes with three appendices describing the use of solar energy on the Moon and on Mars and the value of indigenous water on Mars.

Volume 2: Technical Report** Eldon E. Davis, 1982

This study has the objective of identifying missions for future orbit transfer vehicles 1995 2010 and defining the technology operations and vehicle concepts that satisfy the transportation requirements Several issues were examined The first involved comparison of reusable space and ground based LO2 LH2 OTV s Both vehicles used advanced space engines and aero assist capability The SB OTV provided advantages in life cycle cost performance and potential for improvement The second issue was the comparison of an all LO2 LH2 OTV fleet with a fleet of LO2 LH2 OTVs and electric OTV s The normal growth technology electric OTV used silicon cells with heavy shielding and argon ion thrusters In this case the LO2 LH2 OTV fleet provided a 23% advantage in total transportation cost The third issue dealt with the impact of accelerated technology An accelerated technology LF2 LH2 OTV provided improvements in performance relative to LO2 LH2 OTV but had higher DDT E cost which negated its cost effectiveness The accelerated technology electric vehicle used GaAs cells and annealing but still did not result in the mixed fleet being any cheaper than an all LO2 LH2 OTV fleet The study conclusion is that reusable LO2 LH2 OTV s can serve all general purpose cargo roles between LEO and GEO for the foreseeable future The most significant technology for the second generation vehicle would be space debris protection on orbit propellant storage and transfer and on orbit maintenance capability *Optimal Three-dimensional Resusable Tug Trajectories for Planetary Missions Including Correction for Nodal Precession* Janos Borsody, 1976
