## **Optical Transfer Function Of Imaging Systems:**

The Optical Transfer Function of Imaging Systems Thomas Williams,2018-05-04 The Optical Transfer Function of Imaging Systems deals extensively with the theoretical concept of the optical transfer function OTF its measurement and application to imaging devices The OTF is a mathematical entity describing how well the subject is transferred into an image via the lens The book focuses on the practical aspects of using and measuring the OTF It presents the background physics necessary to understand and assess the performance of the great proliferation of electro optical systems including image intensifiers video cameras and thermal imagers Assuming a senior undergraduate level of optics knowledge the book is suitable for graduate courses in optics electro optics and photographic science In addition it is a practical guide for systems designers who require a means of assessing and specifying the performance of imaging systems It is also of interest to physicists and engineers working in all areas of imaging

### **Measurements of Optical Transfer Function Discretely Sampled**

**Thermal Imaging Systems** ,1992 Measurement of the Optical Transfer Function OTF of discretely sampled thermal imaging systems e g parallel scanned FLIR systems on which analysis is done in the cross scan direction and staring focal plane arrays is increasingly important as digital image acquisition device technology for the 3 5 and 8 12 micron infrared spectral regions is maturing The traditional measurement methods used for continuous scan systems may not be valid for discretely sampled systems This paper presents results of measurements of the OTF using a translating slit to obtain the Line Spread Function LSF for discretely sampled systems Multiple frame acquisition is used for removal of temporal and fixed

pattern noise It is the intent of this laboratory effort to develop a measurement technique to be used when collecting OTF data for discretely sampled systems The new measurement technique is potentially suitable for all systems and if successful will permit characterization of vertical system MTF If this measurement method is found to be useful it will be used to generate the OTF data used in the NVEOD FLIR92 model for further development and verification of the model

**A New Technique for Estimating the Modulation Transfer Function of an Imaging System from Its Edge Response** Patrick L. Smith,AEROSPACE CORP EL SEGUNDO

CALIF ENGINEERING SCIENCE OPERATIONS.,1971 The optical transfer function OTF is the name given to the two dimensional Fourier transform of an imaging system s impulse response or point spread function where a point source in the field of view is an impulse The modulation transfer function MTF is the modulus of OTF A cross section of the MTF can be estimated from a noisy knife edge image recorded in the film An MTF estimate is useful for system performance analysis if the film effects are backed out and image enhancement The new method for estimating the MTF proposed in this report has two major advantages over other methods reported in the literature the averaging effects of the microdensitometer aperture and the nonlinear film characteristics can be included in the regression equation and the phase errors between successive edge scans are estimated Author
