A move from A to E or F will cause Weak Pareto efficiency because one is no different and others not worsened

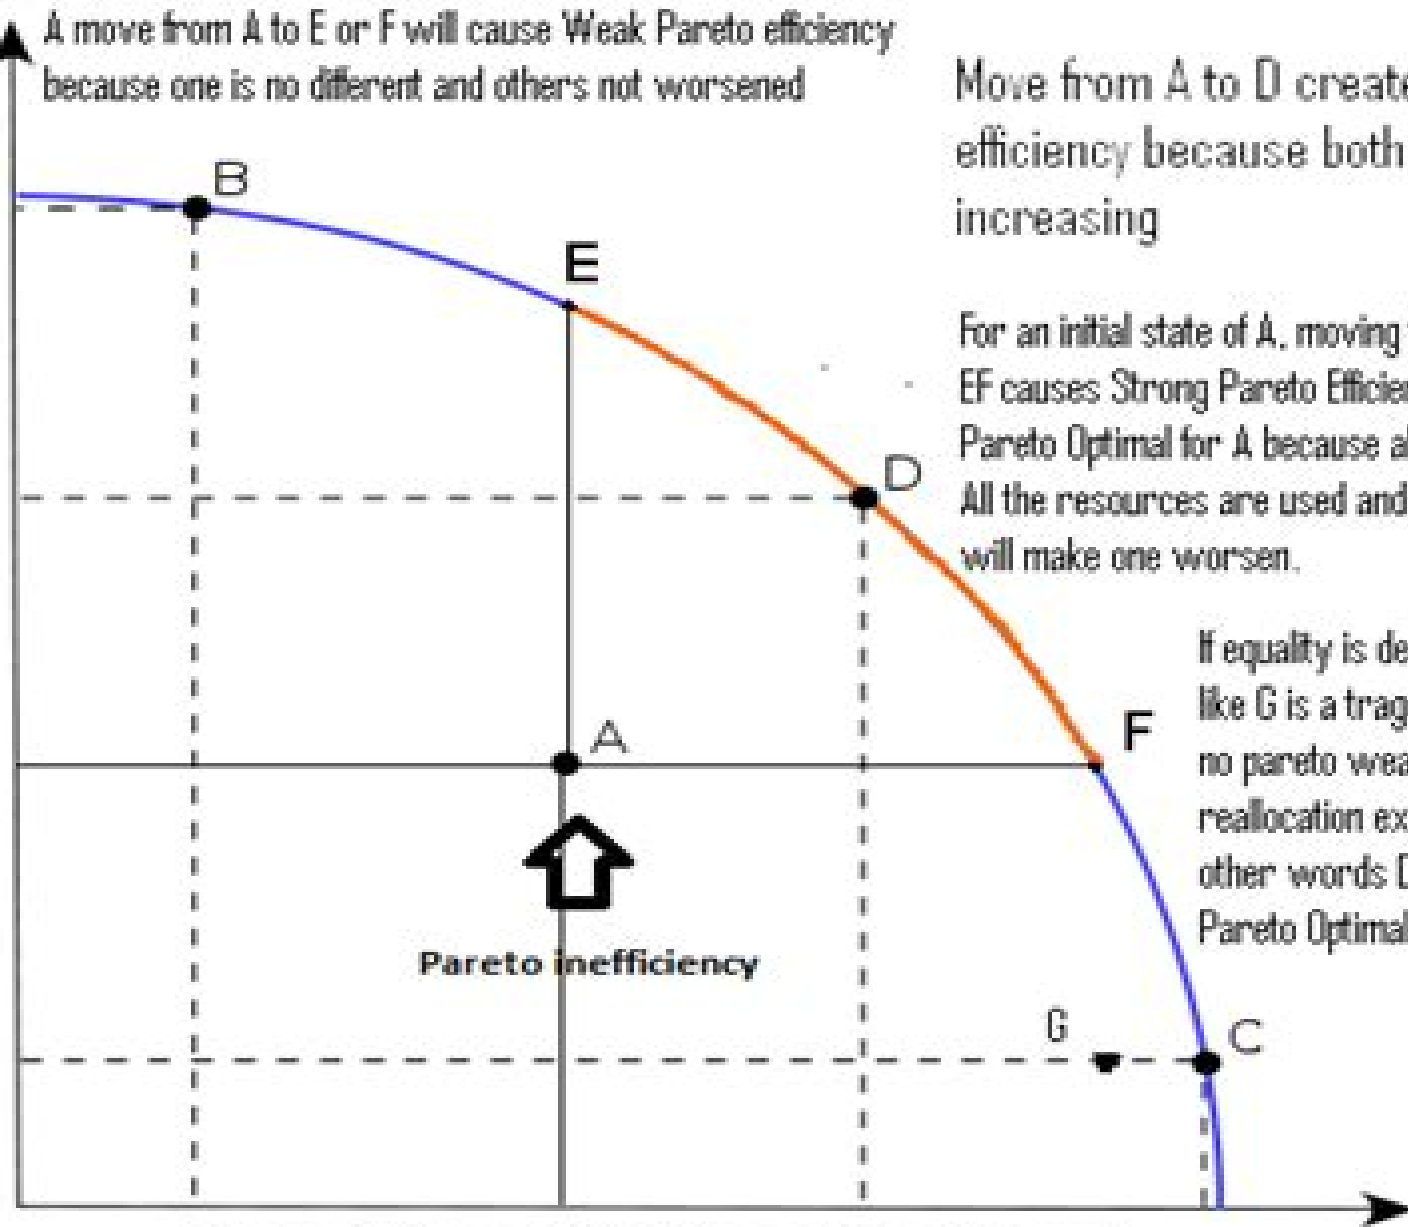

Move from A to D creates strong pareto efficiency because both products are increasing

For an initial state of A, moving to any point on curve EF causes Strong Pareto Efficiency. The curve EF is Pareto Optimal for A because all points are such that All the resources are used and any possible change will make one worsen.

If equality is desired, an initial state like G is a tragedy because there is no pareto weak or strong efficient reallocation exists to reach D. in other words D is not on FC the Pareto Optimality Curve for G.

Martin Barbie, Marcus Hagedorn, Ashok Kaul, 2000 Ethics, Efficiency, and the Market

Allen E. Buchanan, 1985 This clear and incisive book provides the ideal critical synthesis of the best thinking on one of the most important moral social and political issues of our time the role of the market as a basic institution of social organization It articulates the two main types of arguments for and against the market efficiency arguments and ethical arguments and examines their conceptual empirical and moral presuppositions as well as their implications for capitalist socialist and market socialist economic arrangements Among the many striking features of the argument is Buchanan's contention that the allegedly purely technical notions of efficiency current in the social science literature rest on unexamined ethical assumptions and that the ethical arguments offered by philosophers and political theorists depend upon unexamined assumptions about efficiency Buchanan also contends that the problem of relativism for judgments comparing social systems is no less serious for efficiency claims than for ethical claims This short accessible book will raise the quality of the debate in both philosophy and the social sciences It is an ideal introduction to its subject for students in political and social theory economics comparative politics and philosophy

Micro- and Macrodata of Firms Silvia Biffignandi, 2013-03-08 In industrial countries there is a strong interest in the international comparison of business data regarding productivity efficiency and competitiveness This volume presents methods for the statistical analysis of micro and macrodata of firms and for an international comparison of the aggregates Case studies referring to specific countries play an important role for the development of economic hypotheses that should be tested at the international level

Efficiency Criteria for Nationalised Industries (Routledge Revivals) Alec Nove, 2013-02-01 First published in 1973 Efficiency Criteria for Nationalised Industries asks by what criteria we should judge the efficiency of nationalised industries what we mean by saying they should be run commercially and where the public interest should lie In this work Professor Nove believes we answer these questions incorrectly due to a lack of understanding of economic theory and a desire to relate real world economics to that of the text book The author says many economists in a world of indivisibilities complementarities and systems persist in thinking in terms of one dimensional fragmented marginalism Professor Nove who is known for his writings on the Soviet economy raises many points relevant to the East as well as the West His work contributes to the economics of socialism while also making the case for greater realism in economic theory in general
