**Mathematical Optimization Theory and Operations Research** Yury Kochetov,Igor Bykadorov,Tatiana Gruzdeva,2020-09-13 This book constitutes refereed proceedings of the 19th International Conference on Mathematical Optimization Theory and Operations Research MOTOR 2020 held in Novosibirsk Russia in July 2020. Due to the COVID 19 pandemic the conference was held online. The 25 full papers and 8 short papers presented in this volume were carefully reviewed and selected from a total of 102 submissions. The papers in the volume are organised according to the following topical headings combinatorial optimization mathematical programming global optimization game theory and mathematical economics heuristics and metaheuristics machine learning and data analysis Network Optimization: Continuous and Discrete Models Dimitri Bertsekas,1998-01-01 An insightful comprehensive and up to date treatment of linear nonlinear and discrete combinatorial network optimization problems their applications and their analytical and algorithmic methodology. It covers extensively theory algorithms and applications and it aims to bridge the gap between linear and nonlinear network optimization on one hand and integer combinatorial network optimization on the other. It complements several of our books Convex Optimization Theory Athena Scientific 2009 Convex Optimization Algorithms Athena Scientific 2015 Introduction to Linear Optimization Athena Scientific 1997 Nonlinear Programming Athena Scientific 1999 as well as our other book on the subject of network optimization Network Flows and Monotropic Optimization Athena Scientific 1998 Separable Optimization Stefan M. Stefanov,2022-01-01 In this book the theory methods and applications of separable optimization are

considered. Some general results are presented. Techniques of approximating the separable problem by linear programming problem and dynamic programming are also studied. Convex separable programs subject to inequality constraint s and bounds on variables are also studied and convergent iterative algorithms of polynomial complexity are proposed. As an application these algorithms are used in the implementation of stochastic quasigradient methods to some separable stochastic programs. The problems of numerical approximation of tabulated functions and numerical solution of overdetermined systems of linear algebraic equations and some systems of nonlinear equations are solved by separable convex unconstrained minimization problems. Some properties of the Knapsack polytope are also studied. This second edition includes a substantial amount of new and revised content. Three new chapters 15–17 are included. Chapters 15–16 are devoted to the further analysis of the Knapsack problem. Chapter 17 is focused on the analysis of a nonlinear transportation problem. Three new Appendices E–G are also added to this edition and present technical details that help round out the coverage. Optimization problems and methods for solving the problems considered are interesting not only from the viewpoint of optimization theory, optimization methods and their applications but also from the viewpoint of other fields of science, especially the artificial intelligence and machine learning fields within computer science. This book is intended for the researcher, practitioner or engineer who is interested in the detailed treatment of separable programming and wants to take advantage of the latest theoretical and algorithmic results. It may also be used as a textbook for a special topics course or as a supplementary textbook for graduate courses on nonlinear and convex optimization.
