Optimum Experimental Designs, With SAS Anthony Atkinson, Alexander Donev, Randall Tobias, 2007-05-24

Experiments in the field and in the laboratory cannot avoid random error and statistical methods are essential for their efficient design and analysis. Authored by leading experts in key fields this text provides many examples of SAS code results plots and tables along with a fully supported website [Optimal Design and Related Areas in Optimization and Statistics](#) Luc Pronzato, Anatoly Zhigljavsky, 2010-07-25 The present volume is a collective monograph devoted to applications of the optimal design theory in optimization and statistics. The chapters reflect the topics discussed at the workshop *W Optimum Design and Related Statistical Issues* that took place in Juan les Pins France in May 2005. The title of the workshop was chosen as a light hearted celebration of the work of Henry Wynn. It was supported by the Laboratoire I3S CNRS Université de Nice Sophia Antipolis to which Henry is a frequent visitor. The topics covered partly reflect the wide spectrum of Henry's research interests. Algorithms for constructing optimal designs are discussed in Chap 1 where Henry's contribution to the field is acknowledged. Steepest ascent algorithms used to construct optimal designs are very much related to general gradient algorithms for convex optimization. In the last ten years a significant part of Henry's research was devoted to the study of the asymptotic properties of such algorithms. This topic is covered by Chaps 2 and 3. The work by Alessandra Giovagnoli concentrates on the use of majorization and stochastic ordering and Chap 4 is a hopeful renewal of their collaboration. One of Henry's major recent interests is what is now called algebraic statistics the application of computational commutative algebra to statistics and he was partly responsible for introducing the experimental design sub area reviewed in Chap 5. One other sub area is the application to Bayesian networks and Chap 6 covers this with Chap 7 being strongly related. [Optimal Design for Nonlinear Response Models](#) Valerii V. Fedorov, Sergei L. Leonov, 2013-07-15 Optimal Design for Nonlinear Response Models discusses the theory and applications of model based experimental design with a strong emphasis on biopharmaceutical studies. The book draws on the authors many years of experience in academia and the pharmaceutical industry. While the focus is on nonlinear models the book begins with an explanation of [Biometrika](#) D. M. Titterington, 2001 The year 2001 marks the centenary of *Biometrika* one of the world's leading academic journals in statistical theory and methodology. In celebration of this the book brings together two sets of papers from the journal. The first are specially commissioned articles that review the history of the journal and the most important contributions made by papers in the journal to a number of important areas of statistical activity including general theory and methodology surveys and time series. The second group are a selection of particularly seminal articles from the journal's first hundred years. In the process these papers give a full description of the general development of statistical science during the twentieth century.

Functional Approach to Optimal Experimental Design Viatcheslav B. Melas, 2006-04-20 The present book is devoted

to studying optimal experimental designs for a wide class of linear and nonlinear regression models. This class includes polynomial, trigonometrical, rational and exponential models as well as many particular models used in ecology and microbiology. As the criteria of optimality the well known D, E and c criteria are implemented. The main idea of the book is to study the dependence of optimal signs on values of unknown parameters and on the bounds of the design interval. Such a study can be performed on the base of the Implicit Function Theorem, the classical result of functional analysis. The idea was first introduced in the author's paper Melas 1978 for nonlinear in parameters exponential models. Recently it was developed for other models in a number of works Melas 1995, 2000, 2001, 2004, 2005, Dette, Melas 2002, 2003, Dette, Melas, Pepelyshev 2002, 2003, 2004b and Dette, Melas, Biederman 2002. The purpose of the present book is to bring together the results obtained and to develop further underlying concepts and tools. The approach mentioned above will be called the functional approach. Its brief description can be found in the Introduction. The book contains eight chapters. The first chapter introduces basic concepts and results of optimal design theory initiated mainly by J. Kiefer. **Computer Aided Optimum Design of Structures VI** Santiago Hernández, Alain J. Kassab, C. A. Brebbia, 1999. In this text researchers from research centres and industry present current advances in structural optimization. The 35 papers include the following topics: shape and topology optimization, optimal control, advances in numerical optimization and emergent applications of design optimization.
