More than Moore Guo Qi Zhang, Alfred van Roosmalen, 2010-01-23 In the past decades the main stream of microelectronics progress has been mainly powered by Moore s law which focuses on IC miniaturization down to nanoscale While the microelectronics community around the world continues to invent new solutions to keep Moore s law alive there is a fast increasing need for non digital and mixed signal More than Moore MtM type technologies that are still based upon or derived from silicon technologies but do not simply scale with Moore s law Typical examples are devices incorporating RF power high voltage passive components sensors and actuators MEMS Bio chip bio systems microfluidics solid state lighting etc The increasing momentum of MtM is triggered by the increasing needs for high

level heterogeneous system integration including non digital functions the necessity to speed up innovative product creation and to broaden the product portfolio of IC fabs and the limiting cost and time factors of advanced system on chip SoC development It is believed that MtM will add value to society on top of and beyond advanced semiconductors technologies with fast increasing marketing potentials and that it will drive paradigm shift for technologies applications and business models

All-Optical Signal Processing Stefan Wabnitz,Benjamin J. Eggleton,2015-04-11 This book provides a comprehensive review of the state of the art of optical signal processing technologies and devices It presents breakthrough solutions for enabling a pervasive use of optics in data communication and signal storage applications It presents presents optical signal processing as solution to overcome the capacity crunch in communication networks The book content ranges from the development of innovative materials and devices such as graphene and slow light structures to the use of nonlinear optics for secure quantum information processing and overcoming the classical Shannon limit on channel capacity and microwave signal processing Although it holds the promise for a substantial speed improvement today s communication infrastructure optics remains largely confined to the signal transport layer as it lags behind electronics as far

as signal processing is concerned This situation will change in the near future as the tremendous growth of data traffic requires energy efficient and fully transparent all optical networks The book is written by leaders in the field *JTEC Panel on Optoelectronics in Japan and the United States* Stephen R.
