technique used to transfer data between a browser and server asynchronously without posting the web page to the server. Asynchronously implies that the processing of the web page continues while the Ajax request is sent to the server and a response is received from the server. The web page or section(s) of the web page is refreshed with the Ajax response without reposting the web page. Ajax has the following advantages over non Ajax web applications:

- Reduced response time and reduced server load as the complete web page is not reposted.
- Reduced bandwidth of web applications as only data is transferred and the HTML format is applied in the browser.
- Separation of data format and style.

The book covers web search and RSS Feed with Ajax as well as form validation with Ajax frameworks for Java, JSP, JSF and PHP. It discusses using Ajax in Oracle JDeveloper and is IDE based. JDeveloper has the following advantages over Eclipse IDE:

- JDeveloper 11g provides an integrated JavaScript Editor for Ajax Web development.
- It also provides a PHP extension.
- JDeveloper has a built in support for JSF and for JDBC.
