Oracle Parallel Processing

Oracle Parallel Processing:

Oracle Parallel Processing Tushar Mahapatra, Sanjay Mishra, 2000 Parallel processing is becoming increasingly important to database computing. Databases often grow to enormous sizes and are accessed by huge numbers of users. This growth strains the ability of single processor and single computer systems to handle the load. More and more organizations are turning to parallel processing technologies to give them the performance, scalability, and reliability they need. Anyone managing a large database, a database with a large number of concurrent users, or a database with high availability requirements such as a heavily trafficked e-commerce site needs to know how to get the most out of Oracle's parallel processing technologies. Oracle Parallel Processing is the first book to describe the full range of parallel processing capabilities in the Oracle environment, including those new to Oracle8i. It covers: What is parallel processing; features, benefits, and pitfalls; who needs it and who doesn't; what features does Oracle provide and what are their requirements and overhead implications. The book answers these questions and presents the various parallel architectures: SMP or Symmetric Multiprocessing, MPP or Massively Parallel Processing, clustered systems, and NUMA or Non Uniform Memory Access. Oracle parallel execution: Oracle supports a variety of parallel execution features in the database. The book covers the use, administration, and tuning of these features: parallel query, parallel data loading, parallel DML (Data Manipulation Language), parallel object creation through DDL (Data Definition Language), and parallel replication propagation. Oracle Parallel Server: Oracle also provides the OPS option, which works to be spread over both multiple CPUs and multiple nodes. This book covers OPS architecture, requirements, administration, tuning, storage management, recovery, and application failover issues. Oracle Parallel Processing also contains several case studies showing how to use Oracle's parallel features in a variety of real-world situations.

Performance Evaluation of Oracle Parallel Execution Pramukh Narayan Rao Jadhav, California State University, Sacramento, 2011 To utilize the vast number of resources like multi-processors and large amount of memory that are available with the new age computers, Oracle has come out with Oracle Parallel Execution that enables to enhance the performance of queries by reducing the execution time and cost of execution. In this project, we will explain the types of queries that are eligible to be executed in a parallel order and analyze the enhancement in the performance of running these queries as compared to running them in a serial order. We will be using Oracle 11g RDBMS and associated tools to gather and analyze data. We will be using Oracle's Explain Plan utility to gather data about the execution plan used during the execution of the query and TKPROF to calculate the execution time, count the reads and writes, paging, and the other resources used during the execution. In this project, we will also see how tuning certain system parameters can further enhance the performance of parallel query execution. To estimate the performance of Oracle's Parallel Execution feature, we will compare the performance of executing certain SQL statements using parallel execution versus the same statements run in serial order. By optimizing query construction and by tuning the Oracle database to facilitate for maximum utilization of the

available resources we can achieve a high degree performance enhancement both in execution time and in cost of execution

Mining Very Large Databases with Parallel Processing Alex A. Freitas, Simon H. Lavington, 2012-12-06 Mining Very Large Databases with Parallel Processing addresses the problem of large scale data mining It is an interdisciplinary text describing advances in the integration of three computer science areas namely intelligent machine learning based data mining techniques relational databases and parallel processing The basic idea is to use concepts and techniques of the latter two areas particularly parallel processing to speed up and scale up data mining algorithms The book is divided into three parts The first part presents a comprehensive review of intelligent data mining techniques such as rule induction instance based learning neural networks and genetic algorithms Likewise the second part presents a comprehensive review of parallel processing and parallel databases Each of these parts includes an overview of commercially available state of the art tools The third part deals with the application of parallel processing to data mining The emphasis is on finding generic cost effective solutions for realistic data volumes Two parallel computational environments are discussed the first excluding the use of commercial strength DBMS and the second using parallel DBMS servers It is assumed that the reader has a knowledge roughly equivalent to a first degree BSc in accurate sciences so that s he is reasonably familiar with basic concepts of statistics and computer science The primary audience for Mining Very Large Databases with Parallel Processing is industry data miners and practitioners in general who would like to apply intelligent data mining techniques to large amounts of data The book will also be of interest to academic researchers and postgraduate students particularly database researchers interested in advanced intelligent database applications and artificial intelligence researchers interested in industrial real world applications of machine learning [Principles & Implementation of Datawarehousing](#) Rajiv
