Next Cold War:

Preventing the Next Cold War Andrew Small, 2005 *The Next Cold War?* James M. Hanson, 1996-09-24 The Next Cold War sounds a warning the United States may be contributing to another cold war through its competitive unilateral and regional economic policies Whereas wars of the past usually resulted from political conflict Hanson warns that a new cold war may result from economic conflict This raises important questions for American policymakers Will the United States be a world leader that promotes cooperation and unity or will it seek to create competition and division Will the United States address the basic problems of population environmental deterioration and economic stagnation in concert with other nations or will it pursue narrow geopolitical and geoeconomic power strategies This fascinating work explores both sides of these questions and poses alternatives that will promote world cooperation and unity **The Next Cold War** Mohammed Elgayar, 2018 The thesis reviews the implications of Sino American conflicts in the context of contemporary international relations Since the end of the Cold War the threat of direct conflict between major powers has declined due to the logic of mutually assured destruction leaving a gap in the study of power transition theories How can transitions be violent if there is no direct conflict This thesis proposes that a new mechanism of conflict has replaced the traditional means of violent transition proxy wars The question this thesis seeks to answer is Has the heightened Sino American rivalry increased the number of conflicts Beijing has intervened in If so which factors best explain the logic behind Chinese intervention Balancing intervention or opportunism This thesis implements a longitudinal design to explore the changes in interventions by both actors over time The cases that involved both actors intervening in opposition Iraq Syria and Fatah Hamas were then presented in case studies to determine whether the intervention was best explained by strategic balancing or opportunism While the thesis ultimately determines that it is too early to define a direct relationship between the height of rivalry and intervention it does offer insight into the potential trajectory and what a power transition through proxy wars might look like This research aims to predict the trajectory of the Sino American power transition in hopes of understanding where it will unfold as a series of proxy wars within a greater violent power transition between the two powers The Missile Next Door Gretchen Heefner, 2012-09-10 In the 1960s the Air Force buried 1 000 ICBMs in pastures across the Great Plains to keep U S nuclear strategy out of view As rural civilians of all political stripes found themselves living in the Soviet crosshairs a proud Plains individualism gave way to an economic dependence on the military industrial complex that still persists today

Constructing International Relations: The Next Generation Karin M. Fierke, Knud Erik Jorgensen, 2015-06-01 The constructivist approach is the most important new school in the field of postcold war international relations Constructivists assume that interstate and interorganizational relations are always at some level linguistic contexts Thus they bridge IR theory and social theory This book explores the constructivist approach in IR as it has been developing in the larger context of social science worldwide with younger IR scholars building anew on the tradition of Wittgenstein Habermas Luhman

Foucault and others The contributors include Friedrich Kratochwil Harald Muller Matthias Albert Jennifer Milliken Birgit Locher Dodge and Elisabeth Prugl Ben Rosamond Nicholas Onuf Audie Klotz Lars Lose and the editors

Exploring the Next Frontier Matthew Wilhelm Kapell, 2016-02-19 The 1960s and early 70s saw the evolution of Frontier Myths even as scholars were renouncing the interpretive value of myths themselves Works like Joe Haldeman's The Forever War exemplified that rejection using his experiences during the Vietnam War to illustrate the problematic consequences of simple mythic idealism Simultaneously Americans were playing with expanded and revised versions of familiar Frontier Myths though in a contemporary context through NASA's lunar missions Star Trek and Gerard K O'Neill's High Frontier This book examines the reasons behind the exclusion of Frontier Myths to the periphery of scholarly discourse and endeavors to build a new model for understanding their enduring significance This model connects NASA's failed attempts to recycle earlier myths wholesale to Star Trek's revision of those myths and rejection of the idea of a frontier paradise to O'Neill's desire to realize such a paradise in Earth's orbit This new synthesis defies the negative connotations of Frontier Myths during the 1960s and 70s and attempts to resuscitate them for relevance in the modern academic context

Great Power Competition as the New Normal of China-US Relations Jinghao Zhou, 2022-09-01 Will China U S relations come back to the normal track Does the confrontational approach work for China US relations This book argues that it is an unrealistic hope to bring China US relations back to the so called normal track because the great power competition will be a new normal of China US relations and the USA will gain more from strategic competition than cooperation in the long run This book shows that the strategy of great power cooperation through competition is more positive and constructive than the approaches of peaceful coexist and maximum pressure This book does not intend to provide policy recommendations for governments to consider but mainly to explain why the great power competition is inevitable and why it is necessary to continuously work with China in some areas through strategic competition This book alarms the importance of understanding the nature of the Chinese Communist Party during the great power competition and aims to motivate both sides to revisit their foreign policy practice and come up with a better foreign policy strategy of handling China US relations

Cities of Knowledge Margaret O'Mara, 2005 What is the magic formula for turning a place into a high tech capital How can a city or region become a high tech powerhouse like Silicon Valley For over half a century through boom times and bust business leaders and politicians have tried to become the next Silicon Valley but few have succeeded This book examines why high tech development became so economically important late in the twentieth century and why its magic formula of people jobs capital and institutions has been so difficult to replicate Margaret O Mara shows that high tech regions are not simply accidental market creations but cities of knowledge planned communities of scientific production that were shaped and subsidized by the original venture capitalist the Cold War defense complex At the heart of the story is the American research university an institution enriched by Cold War spending and actively engaged in economic development The story of the city

of knowledge broadens our understanding of postwar urban history and of the relationship between civil society and the state in late twentieth century America It leads us to further redefine the American suburb as being much more than formless sprawl and shows how it is in fact the ultimate post industrial city Understanding this history and geography is essential to planning for the future of the high tech economy and this book is must reading for anyone interested in building the next Silicon Valley
