Linington,Zoran Milosevic,Akira Tanaka,Antonio Vallecillo,2011-09-06 The Reference Model of Open Distributed Processing RM ODP is an international standard that provides a solid basis for describing and building widely distributed systems and applications in a systematic way It stresses the need to build these systems with evolution in mind by identifying the concerns of major stakeholders and then expressing the design as a series of linked viewpoints Although RM ODP has been a standard for more than ten years many practitioners are still unaware of it Building Enterprise Systems with ODP An Introduction to Open Distributed

Processing offers a gentle pathway to the essential ideas that constitute ODP and shows how these ideas can be applied when designing and building challenging systems. It provides an accessible introduction to the design principles for software engineers and enterprise architects. The book also explains the benefits of using viewpoints to produce simpler and more flexible designs and how ODP can be applied to service engineering, open enterprise and cloud computing. The authors include guidelines for using the Unified Modeling Language™ UML notation and for structuring and writing system specifications. They elucidate how this fits into the model driven engineering tool chain via approaches such as Model Driven Architecture MDA. They also demonstrate the power of RM ODP for the design and organization of complex distributed IT systems in e government, e health and energy and transportation industries. All concepts and ideas in the book are illustrated through a single running example that describes the IT support needed by a medium sized company as it grows and develops.
