Object Oriented Concurrent Programming Mit Press Series In Computer Systems:

Object-oriented Concurrent Programming Akinori Yonezawa, Mario Tokoro, 1987 This book deals with a major theme of the Japanese Fifth Generation Project which emphasizes logic programming parallelism and distributed systems It presents a collection of tutorials and research papers on a new programming and design methodology in which the system to be constructed is modeled as a collection of abstract entities called objects and concurrent messages passing among objects This methodology is particularly powerful in exploiting as well as harnessing the parallelism that is naturally found in problem domains The book includes several proposals for programming languages that support this methodology as well as the applications of object oriented concurrent programming to such diverse areas as artificial intelligence software engineering music synthesis office information systems and system programming It is the first compilation of research results in this rapidly emerging area Contents Concurrent Programming Using Actors Concurrent Object Oriented Programming in Act 1 Modelling and Programming in a Concurrent Object Oriented Language ABCL 1 Concurrent Programming in ConcurrentSmallTalk Orient84K An Object Oriented Concurrent Programming Language for Knowledge Representation POOL T A Parallel Object Oriented Programming Language Concurrent Strategy Execution in Omega The Formes System A Musical Application of Object Oriented Concurrent Programming Distributed Problem Solving in ABCL 1 The contributors are Gul Agha MIT Pierre America Phillips Research Laboratory Eindhoven Giuseppe Attardi DELPHI SpA Jean Pierre Briot IRCAM Paris Pierre Cointe IRCAM Paris Carl Hewitt MIT Yutaka Ishikawa Keio University Henry Lieberman MIT Etsuya Shibayama Tokyo Institute of Technology Mario Tokoro Keio University Yasuhiko Yokote Keio University and Akinori Yonezawa Tokyo Institute of Technology Object Oriented Concurrent Programming is included in The MIT Press Series in Artificial Intelligence edited by Patrick Henry Winston and Michael Brady **PARLE '93 Parallel Architectures and Languages Europe** Arndt Bode, Mike Reeve, 1993-06-07 Parallel processing offers a solution to the problem of providing the processing power necessary to help understand and master the complexity of natural phenomena and engineering structures By taking several basic processing devices and connecting them together the potential exists of achieving a performance many times that of an individual device However building parallel application programs is today recognized as a highly complex activity requiring specialist skills and in depth knowledge PARLE is an international European based conference which focuses on the parallel processing subdomain of informatics and information technology It is intended to become THE European forum for interchange between experts in the parallel processing domain and to attract both industrial and academic participants with a technical programme designed to provide a balance between theory and practice This volume contains the proceedings of PARLE 93 The PARLE conference came into existence in 1987 as an initiative from the ESPRIT I programme and the format was revised in 1991 92 PARLE 93 is the second conference with the new format and was held in Munich Object-Based Concurrent Computing Mario Tokoro, Oscar Nierstrasz, Peter Wegner, 1992-06-16 The

ECOOP 91 Workshop on Object Based Concurrent Computing was organized to provide a forum on concurrent distributed and open ended computing. The emphasis was on conceptual theoretical and formal aspects as well as practical aspects and sound experience since such a viewpoint was deemed indispensable to investigate and establish a basis for future development. This volume contains 12 papers selected from 25 presented at the workshop together with a paper by J A Goguen who was an invited speaker at the workshop. The papers are classified into four categories: Formal methods 1 three papers are concerned with the formal semantics of concurrent objects based on process calculi; Formal methods 2 four papers are concerned with various formal approaches to the semantics of concurrent programs; Concurrent programming three papers; Models three papers are concerned with models for concurrent systems.

Ada: The Design Choice Angel Alvarez, 1989-07-06 This book contains the proceedings of the 1989 Ada Europe conference. These meetings constitute the most significant events in this field within Europe and attract delegates from around the world. The theme of this year's conference is design methods, this is of major importance since both Ada compilers and the applications built with Ada are huge. Papers in this volume which have all been carefully refereed study the design methods within Ada and how they may need to be augmented with additional methods and tools where necessary. They make informed and essential reading for all involved in the use of Ada in industry and research.

Software Engineer's Reference Book John A McDermid, 2013-10-22 Software Engineer's Reference Book provides the fundamental principles and general approaches, contemporary information and applications for developing the software of computer systems. The book is comprised of three main parts, an epilogue and a comprehensive index. The first part covers the theory of computer science and relevant mathematics. Topics under this section include logic, set theory, Turing machines, theory of computation and computational complexity. Part II is a discussion of software development methods, techniques and technology primarily based around a conventional view of the software life cycle. Topics discussed include methods such as CORE, SSADM and SREM and formal methods including VDM and Z. Attention is also given to other technical activities in the life cycle including testing and prototyping. The final part describes the techniques and standards which are relevant in producing particular classes of application. The text will be of great use to software engineers, software project managers and students of computer science.

Object-Technologies for Advanced Software Kokichi Futatsugi, Satoshi Matsuoka, 1996-02-28 This book constitutes the refereed proceedings of the Second International Symposium on Object Technologies for Advanced Software ISOTAS 96 held in Ishikawa, Japan in March 1996. ISOTAS 96 was sponsored by renowned Japanese and international professional organisations. The 14 papers included in final full versions together with the abstracts of four invited papers were carefully reviewed and selected from a total of 56 submissions. They address most current topics in object software technology: object oriented programming, object oriented databases etc. The volume is organized in sections on design and evolution, parallelism and distribution, meta and reflection and evolution of reuse.

Advances in Computer Systems Architecture Amos Omondi, 2003-09-16 This book constitutes the

refereed proceedings of the 8th Asia Pacific Computer Systems Architecture Conference ACSAC 2003 held in Aizu Wakamatsu Japan in September 2003 The 23 revised full papers presented together with 8 invited papers were carefully reviewed and selected from 30 submissions The papers are organized in topical sections on processor architectures and innovative microarchitectures parallel computer architectures and computation models reconfigurable architectures computer arithmetic cache and memory architectures and interconnection networks and network interfaces **Resources in Parallel and Concurrent Systems**, 1991 Computer Systems Organization Parallel architecture **ABCL** Akinori Yonezawa, 1990 This book provides an overview of the new paradigm through the programming language ABCL
