Observing Systems:

Coastal Ocean Observing Systems Yonggang Liu, Heather Kerkering, Robert H. Weisberg, 2015-06-01 Coastal Ocean Observing Systems provides state of the art scientific and technological knowledge in coastal ocean observing systems along with guidance on establishing restructuring and improving similar systems. The book is intended to help oceanographers understand, identify, and recognize how oceanographic research feeds into the various designs of ocean observing systems. In addition, readers will learn how ocean observing systems are defined and how each system operates in relation to its geographical, environmental, and political region. The book provides further insights into all of these problem areas, offering lessons learned and results from the types of research sponsored and utilized by ocean observing systems and the types of research design and experiments conducted by professionals specializing in ocean research and affiliated with observing systems. Includes international contributions from individuals working in academia, management, and industry. Showcases the application of science and technology in coastal observing systems. Highlights lessons learned on partnerships, governance, structure, data management, and stakeholder relationships required for successful implementation. Provides insight into how ocean research transfers to application and societal benefit.

The Global Ocean Observing System Committee on the Global Ocean Observing System, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1997-03-14 The Global Ocean Observing System is a study by the Ocean Studies Board intended to provide information and advice to federal agencies the U.S. GOOS Interagency ad hoc Working Group to help define and implement an effective, affordable, and customer-based U.S. contribution to GOOS. In particular, the committee was asked to provide advice to U.S. agencies regarding a practical concept for GOOS, identify potential applications and users of GOOS during the next 3 to 5 years and beyond, recommend appropriate roles for industry and academia in GOOS, and prioritize observational and infrastructure activities that should be undertaken or continued by the United States in its initial commitments to GOOS. In response to its charge, the committee reviewed the status of GOOS planning and implementation at both the national and international levels, invited presentations by relevant federal agencies and members of the private sector, and examined the range of potential uses and benefits of products derived from information to be collected by GOOS. Finally, the committee drew upon this information and its own expertise to develop a number of recommendations intended to help move the implementation of GOOS forward.

Demonstrating Observation Impacts for the Ocean and Coupled Prediction Yosuke Fujii, Peter R. Oke, Elisabeth Remy, 2025-04-25 Capabilities in ocean data assimilation developed over a decade long project called the Global Ocean Data

Assimilation Experiment GODAE By the end of GODAE many countries had established operational ocean forecast systems and mature ocean reanalysis systems These developments further improved under OceanPredict and are now being extended under several Programs and Projects under the United Nations Ocean Decade including ForeSea SynObs and CoastPredict This Research Topic is intended to showcase the activities being performed under these projects all of which share a common goal of predicting our environment to benefit society

Integrated Ground-Based Observing Systems

Domenico Cimini, Frank S. Marzano, Guido Visconti, 2010-09-15 The book is a collection of the lectures delivered during the 7th International Summer School on Atmospheric and Oceanic Sciences ISSAOS titled Integrated Ground Based Observing Systems Applications for Climate Meteorology and Civil Protection Its aim is to contribute to the scientific understanding of basic concepts and applications of integrated ground based observing systems The first part describes the most common instrumentations showing their strengths and limitations Furthermore strategic plans for the deployment of an observation site are discussed along with an overview of techniques for integrating heterogeneous data The second part introduces cutting edge applications including assimilation in numerical weather prediction climate benchmarking air quality monitoring and meteo hydrological warnings

United States Code 2012 Edition Supplement V, Ocean Circulation and

Climate Andreas Schiller, Tong Lee, Shuhei Masuda, 2013-10-22 The past 20 years have provided us with an unprecedented ability to observe monitor and forecast the oceans In situ and remotely sensed ocean observations in combination with ocean general circulation models using data assimilation and state estimation methods underpin climate applications State estimation aims to provide a dynamically consistent estimation of ocean fields of errors of these fields and of certain model parameters such as mixing coefficients Conversely data assimilation tools have been developed predominantly for ocean prediction applications and ocean reanalyses This chapter describes approaches used by state estimation and data assimilation systems in synthesizing observations and model dynamics We highlight some applications including their limitations for climate research and address the challenges ahead in relation to the ocean observing system

Adequacy of

Climate Observing Systems National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Commission on Geosciences, Environment, and Resources, Climate Research Committee, Panel on Climate Observing Systems Status, 1999-03-01 The 1997 Conference on the World Climate Research Programme to the Third Conference of the Parties of the United Nations Framework Convention on Climate Change concluded that the global capacity to observe the Earth's climate system is inadequate and is deteriorating worldwide As a result the chair of the subcommittee of the US Global Change Research Program USGCRP requested a National Research Council study to assess the current status of the climate observing capabilities of the United States This report focuses on existing observing systems for detection and attribution of climate change with special emphasis on those systems with long time series

Observing Systems for Atmospheric Composition

Guido Visconti,Pietro Di Carlo,W. Brune,M. Schoeberl,Andreas Wahner,2007-03-20 One challenge in atmospheric chemistry is understanding the intercontinental transport and transformation of gases and aerosols This book describes observational and modeling techniques used to understand atmospheric composition from satellites aircraft and ground based platforms Common ideas

presented throughout are the role of each component in an observing system for atmospheric composition and advances necessary to improve understanding of atmospheric composition **Oceanobs'19: An Ocean of Opportunity. systematically for the first time and a global repeat hydrographic survey and selected transport measurements supplement these networks. The system is both integrated and composite. It depends upon in situ and satellite networks that measure the same variable using different sensors. In this way optimum use is made of all available platforms and sensors to maximize coverage and attain maximum accuracy. The biggest challenge for the greater oceanographic community including both research and operational components will be demonstrating impacts and benefits sufficient to justify the funds needed to complete the observing system as well as to sustain its funding for the long term.
