Ocean Planet Peter Benchley, Judith Gradwohl, 1995 A collection of essays photographs and facts explores the role the seas play in our lives **Life on an Ocean Planet** ,2006 **The Wealth of Oceans** Michael L. Weber, Judith Gradwohl, 1995 An adjunct to Ocean Planet a major traveling exhibition opening at the Smithsonian Institution in 1995 this fascinating book is the first to explore the newest discoveries in oceanography and marine ecology in the context of the global economy and human population growth For thousands of years humanity has seen the oceans as a mysterious and limitless source of treasures to be fished harvested mined and salvaged Now accelerating developments in ocean studies offer a new understanding of the oceans their role in a global ecosystem and their vulnerability to threats from human action Drawing on the latest research this book offers a fascinating tour of the complex reaches of our ocean world and points the way toward changes that will preserve rather than squander the wealth of oceans America's Ocean Wilderness Gary Kroll, 2008 Examines a handful of famous ocean explorers and naturalists including Jacques Cousteau Thor Heyerdahl and Rachel Carson among others to demonstrate how their work helped shape the way many Americans would think about and interact with the ocean Sport Diver ,2001-01 **Tangentiallites and Tangentiallites. The Planets are Not Projectiles, But Tangentiallites. The Ocean's Tides are the Result of Tangential and Radial Forces. A Modern Discussion** Asahel Phelps Pichereau, 1894 **The Exoplanet Handbook** Michael Perryman, 2018-08-30 With the discovery of planets beyond our solar system 25 years ago exoplanet research has expanded dramatically with new state of the art ground based and space based missions dedicated to their discovery and characterisation With more than 3 500 exoplanets now known the complexity of the discovery techniques observations and physical characterisation have grown exponentially This Handbook ties all these avenues of research together across a broad range of exoplanet science Planet formation exoplanet interiors and atmospheres and habitability are discussed providing in depth coverage of our knowledge to date Comprehensively updated from the first edition it includes instrumental and observational developments in depth treatment of the new Kepler mission results and hot Jupiter atmospheric studies and major updates on models of exoplanet formation With extensive references to the research literature and appendices covering all individual exoplanet discoveries it is a valuable reference to this exciting field for both incoming and established researchers **Popular Science** ,1995-02 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better **Encyclopedia of Astrobiology** Muriel Gargaud, Ricardo Amils, 2011-05-26 Astrobiology is a remarkably interdisciplinary field This reference serves as a key to understanding technical terms from the different subfields of astrobiology including astronomy biology chemistry the geosciences and the space sciences *Ocean Worlds* Jan Zalasiewicz, Mark Williams, 2014-10-23 Oceans make up most of the surface of our blue planet They may form just a sliver

on the outside of the Earth but they are very important not only in hosting life including the fish and other animals on which many humans depend but in terms of their role in the Earth system in regulating climate and cycling nutrients As climate change pollution and over exploitation by humans puts this precious resource at risk it is more important than ever that we understand and appreciate the nature and history of oceans There is much we still do not know about the story of the Earth's oceans and we are only just beginning to find indications of oceans on other planets In this book geologists Jan Zalasiewicz and Mark Williams consider the deep history of oceans how and when they may have formed on the young Earth topics of intense current research how they became salty and how they evolved through Earth history We learn how oceans have formed and disappeared over millions of years how the sea nurtured life and what may become of our oceans in the future We encounter some of the scientists and adventurers whose efforts led to our present understanding of oceans And we look at clues to possible seas that may once have covered parts of Mars and Venus that may still exist below the surface on moons such as Europa and Callisto and the possibility of watery planets in other star systems

Storying the Ecocatastrophe Helena Duffy, Katarina Leppänen, 2024-05-31 How do writers and artists represent the climate catastrophe so that their works stir audiences to political action or at least raise their environmental awareness without however appearing didactic *Storying the Ecocatastrophe* attempts to answer this question while interrogating the potential of narrative to become a viable political force The collection of essays achieves this by examining the representational strategies and ideological goals of contemporary cultural productions about climate change These productions have been created across different genres such as the traditional novel dance performance solarpunk economic report collage and space opera as well as across different languages and cultures The volume's twelve chapters demonstrate that rising temperatures erratic weather extinction of species depletion of resources and coastal erosion and flooding are an effect of our abusive relationship with nature They also show that our use of nuclear power extraction of natural resources and extensive farming including heavy reliance on pesticides intersect with intrahuman violence as fleshed out by heteropatriarchy racism neo colonialism and capitalism They finally argue that human activity has indirectly contributed to other contemporary crises namely the migrant crisis and the spread of contagious diseases such as Covid 19 Chapter 8 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
