**Obsessive-compulsive Disorder** Mitzi Waltz, 2000

Obsessive compulsive disorder (OCD) is one of the most common psychiatric problems faced by children, although frequently not diagnosed or treated. Many children diagnosed with OCD also turn out to have other brain-based disorders, particularly ADD/ADHD. Childhood OCD can be a truly debilitating disability, not just a minor problem or personality quirk. Children with OCD experience extreme anxiety and embarrassment. Their OCD symptoms often prevent them from building good relationships, from achieving their best in school, and from having a normal childhood. The effects of this disruption can be painful and lifelong. The good news is that OCD is very treatable. *Obsessive Compulsive Disorder* helps parents secure a diagnosis, manage family life, understand medical interventions, explore therapeutic and other interventions, get care with an existing health plan, even with no coverage of mental disorders. Author Mitzi Waltz, an advocate for children's neurological issues, has included the stories of dozens of parents and adolescents.

[Children with Obsessive Compulsive Disorder](#) Gary Elliott, 2014-06-16 Seminar paper from the year 2010 in the

subject Psychology Consulting and Therapy Atlantic International University language English abstract Obsessive compulsive disorder initially was thought to be a relatively rare disorder but is now recognized as a common psychiatric issue with an estimated lifetime prevalence of 1.9 to 3.3%. The United States has a prevalence rate for this anxiety disorder of one in every one hundred children. Research among the five to six million U.S. adults living with OCD discovered that 50 percent said that their symptoms began in childhood. A statistic like this drives home the need for both parents and educators to have a thorough understanding of the signs and symptoms of OCD in children in an attempt to identify and address the disorder as early as possible in the child's life. One of the greatest stumbling blocks to seeking professional attention for a child is the myths and misconceptions attached to the behaviour of a child suffering with this disorder. Mark suffers with Obsessive Compulsive Disorder (OCD) characterized by obsessions or compulsions usually both that cause marked distress are time consuming take more than 1 hour a day or significantly interfere with functioning (Phillips, 2009, p. 282). An obsession is defined as a recurrent persistent and intrusive thought, impulse or image that is difficult to dismiss despite its disturbing nature. A compulsion is often known as a ritual. It is excessive repetitive behaviour such as hand washing as in Mark's case above or mental acts such as counting that are performed to try to decrease the anxiety caused by an obsession. These compulsions are usually difficult to resist or control (p. 279).

**Family Based Treatment for Young Children With OCD** Jennifer B. Freeman, Abbe Marrs Garcia, 2009. This therapist guide presents a family based treatment for OCD specifically designed for children ages 5-8. Using a cognitive behavioural approach it provides psycho education for the family and a set of parent strategies involving differential attention modelling and scaffolding techniques and child strategies that include cognitive tools such as bossing back and using a feelings thermometer to rate anxiety.
