## **Man Made Future:**

*Man-made Futures* Nigel Cross, David Elliott, Robin Roy, 1974      Technological Visions Marita Sturken, Douglas Thomas, Sandra Ball-Rokeach, 2004 For as long as people have developed new technologies there has been debate over the purposes shape and potential for their use In this exciting collection a range of contributors including Sherry Turkle Lynn Spigel John Perry Barlow Langdon Winner David Nye and Lord Asa Briggs discuss the visions that have shaped new technologies and the cultural implications of technological adaptation Focusing on issues such as the nature of prediction community citizenship consumption and the nation as well as the metaphors that have shaped public debates about technology the authors examine innovations past and present from the telegraph and the portable television to the Internet to better understand how our visions and imagination have shaped the meaning and use of technology Author note Marita Sturken is Associate Professor in the Annenberg School for Communication at the University of Southern California and the author of *Tangled Memories The Vietnam War the AIDS Epidemic and the Politics of Remembering* and *Practices of Looking An Introduction to Visual Culture* with Lisa Cartwright Douglas Thomas is Associate Professor in the Annenberg School for Communication at the University of Southern California He is author of three books most recently *Hacker Culture* Sandra Ball Rokeach is a Professor and Director of the Communication Technology and Community Program in the Annenberg School for Communication at the University of Southern California She is author of several books including *Theories of Mass Communication* with M L De Fleur      Humanity's Rise to Superdominance, the Global Ecological Crisis, and the Way Forward for Education Adam C. Scarfe, 2022-12-01 This book pinpoints the evolutionary connection between the global ecological crisis and transgenerational learning and education As Julian Huxley 1887 1975 described the cumulative passing down of knowledge skills and ideas by one generation to the next over eons of time which has been afforded by the advent of complex languages in the evolutionary past is chiefly responsible for humanity s planetary superdominance However given that the drive of the human species to increase its control over the natural world has today run up against ecological limits there is an evolutionary existential choice to be made in relation to the ultimate purposes of formal education Should humanity double down on the anthropocentric humanist project of superdominance including the goals of unlimited economic growth development and scientific and technological progress Alternatively should a biocentric anti humanist and or postmodernist deconstruction of formal education take place Or should a holistic organicist orientation emphasizing biological wisdom help to shape its future As this book shows the answers to these philosophical questions on the parts of educators prospective teachers and learners will going forward play a key role in deciding the evolutionary trajectories of all life forms on the planet      **Projecting the Future Through Political Discourse** Patricia L. Dunmire, 2011 This monograph examines the rhetorical nature and function of representations of the future in political discourse focusing on political actors use of hegemonic images of future reality to achieve their political goals It argues that a key ideological dimension of political

rhetoric lies in politicians use of projections of the future to legitimate policies and actions This argument is grounded in systemic functional and critical discourse analyses of the Bush Doctrine the U S policy response to the September 11 terrorist attacks which sanctioned a preemptive military posture By focusing on the discursive construction of the future this project addresses a lacunae in critical discourse studies and calls attention to the crucial role that the discourse and practice of futurology has played in post Cold War politics and society It will be of value to scholars interested in the discourses of politics the war on terror U S national security and futurology     *Sharing the World* Michael Carley,Phillipe Spapens,2017-09-25 This work proposes a framework based on the concept of a fair distribution of environmental space to include the diverse needs of North and South Drawing on research in 38 countries it aims to give an equitable basis for global development in order to achieve sustainable consumption by the year 2050 The environmental space approach seeks to explain the limitations of the global market economy as a tool of development and to give us the means to alter it in order to achieve a genuine quality of life rather than simple economic growth In addition this book seeks to urge all countries and peoples to consider and evaluate the environmental space approach and to join in a movement towards sustainable production and consumption for the 21st century     *Critical Terms in Futures Studies* Heike Paul,2019-12-02 This volume provides the essential vocabulary currently employed in discourses on the future in 50 contributions by renowned scholars in their respective fields which examine future imaginaries across cultures and time Not situated in the field of futurology proper it comes at future studies sideways and offers a multidisciplinary treatment of a critical futures vocabulary The contributors have their disciplinary homes in a wide range of subjects history cultural studies literary studies sociology media studies American studies Japanese studies Chinese studies and philosophy and critically illuminate numerous discourses about the future or futures past and present In compiling such a critical vocabulary this book seeks to foster conversations about futures in study programs and research forums and offers a toolbox for discussing them with an adequate degree of complexity     *Man-made Futures* Open University. Faculty of Technology,1975     *The Crime of Aggression* Noah Weisbord,2019-06-11 A gripping behind the scenes account of the dramatic legal fight to hold leaders personally responsible for aggressive war On July 17 2018 starting an unjust war became a prosecutable international crime alongside genocide crimes against humanity and war crimes Instead of collective state responsibility our leaders are now personally subject to indictment for crimes of aggression from invasions and preemptions to drone strikes and cyberattacks *The Crime of Aggression* is Noah Weisbord s riveting insider s account of the high stakes legal fight to enact this historic legislation and hold politicians accountable for the wars they start Weisbord a key drafter of the law for the International Criminal Court takes readers behind the scenes of one of the most consequential legal dramas in modern international diplomacy Drawing on in depth interviews and his own invaluable insights he sheds critical light on the motivations of the prosecutors diplomats and military strategists who championed the fledgling prohibition on unjust war and those who tried to sink it He untangles

the complex history behind the measure tracing how the crime of aggression was born at the Nuremberg trials only to fall dormant during the Cold War and he draws lessons from such pivotal events as the collapse of the League of Nations the rise of the United Nations September 11 and the war on terror The power to try leaders for unjust war holds untold promise for the international order but also great risk In this incisive and vitally important book Weisbord explains how judges in such cases can balance the imperatives of justice and peace and how the fair prosecution of aggression can humanize modern statecraft

**The Green Paradox** Hans-Werner Sinn,2012-02-03 A leading economist develops a supply side approach to fighting climate change that encourages resource owners to leave more of their fossil carbon underground The Earth is getting warmer Yet as Hans Werner Sinn points out in this provocative book the dominant policy approach which aims to curb consumption of fossil energy has been ineffective Despite policy makers efforts to promote alternative energy impose emission controls on cars and enforce tough energy efficiency standards for buildings the relentlessly rising curve of CO2 output does not show the slightest downward turn Some proposed solutions are downright harmful cultivating crops to make biofuels not only contributes to global warming but also uses resources that should be devoted to feeding the world s hungry In The Green Paradox Sinn proposes a new more pragmatic approach based not on regulating the demand for fossil fuels but on controlling the supply The owners of carbon resources Sinn explains are pre-empting future regulation by accelerating the production of fossil energy while they can This is the Green Paradox expected future reduction in carbon consumption has the effect of accelerating climate change Sinn suggests a supply side solution inducing the owners of carbon resources to leave more of their wealth underground He proposes the swift introduction of a Super Kyoto system gathering all consumer countries into a cartel by means of a worldwide coordinated cap and trade system supported by the levying of source taxes on capital income to spoil the resource owners appetite for financial assets Only if we can shift our focus from local demand to worldwide supply policies for reducing carbon emissions Sinn argues will we have a chance of staving off climate disaster
