Management Guidelines for Asian Floodplain River Fisheries, 1999 **Management Guidelines for Asian Floodplain River Fisheries** Daniel D. Hoggarth, 1999 **Management Guidelines for Asian Floodplain River Fisheries: A spatial, hierarchical and integrated strategy for adaptive co-management**, 1999 Increasing the Contribution of Small-scale Fisheries to Poverty Alleviation and Food Security Christophe Béné, Graeme Macfadyen, Edward Hugh Allison, Food and Agriculture Organization of the United Nations, 2007 The third and main section of the document discusses ways of increasing the contribution of small scale fisheries to poverty alleviation and food security through nine main entry points First the paper revisits conventional fisheries policies and legislation and makes suggestions on how those can be made more pro poor Next the paper emphasizes the importance of capacity building and highlights how cross sectoral interventions can greatly improve the livelihoods of fish dependent communities The paper then proposes a series of broad pro poor or pro small scale fisheries principles before discussing in greater detail three of the main management instruments adopted in fisheries i property right approaches ii co management and iii protected areas The next two sub sections discuss markets and how to make them work for the poor and the important issue of pro poor financing systems and subsidies **Handbook of Fish Biology and Fisheries, Volume 2** Paul J. B. Hart, John D. Reynolds, 2002-09-27 Recent decades have witnessed strong declines in fish stocks around the globe amid growing concerns about the impact of fisheries on marine and freshwater biodiversity Fisheries biologists and managers are therefore increasingly asking about aspects of ecology behaviour evolution and biodiversity that were traditionally studied by people working in very separate fields This has highlighted the need to work more closely together in order to help ensure future success both in management and conservation The Handbook of Fish Biology and Fisheries has been written by an international team of scientists and practitioners to provide an overview of the biology of freshwater and marine fish species together with the science that supports fisheries management and conservation This volume subtitled Fisheries focuses on a wide range of topics including the history of fisheries science methods of capture marketing economics major models used in stock assessments and forecasting ecosystem impacts marine protected areas and conservation It builds on material in Volume 1 Fish Biology which ranges from phylogenetics and biogeography to physiology recruitment life histories genetics foraging reproductive behaviour and community ecology

Together these books present the state of the art in our understanding of fish biology and fisheries and will serve as valuable references for undergraduates and graduates looking for a comprehensive source on a wide variety of topics in fisheries science. They will also be useful to researchers who need up to date reviews of topics that impinge on their fields and decision makers who need to appreciate the scientific background for management and conservation of aquatic ecosystems. To order volume II go to the box in the top right hand corner. Alternatively to order volume I go to <http://www.blackwellpublishing.com/book.asp/ref/0632054123> or to order the 2 volume set go to <http://www.blackwellpublishing.com/book.asp/ref/0632064838>. Provides a unique overview of the study of fish biology and ecology and the assessment and management of fish populations and ecosystems. The first volume concentrates on aspects of fish biology and ecology both at the individual and population levels whilst the second volume addresses the assessment and management of fish populations and ecosystems. Written by an international team of expert scientists and practitioners. An invaluable reference tool for both students, researchers and practitioners working in the fields of fish biology and fisheries.

The Mekong Ian Charles Campbell, 2009-11-20. The Mekong is the most controversial river in Southeast Asia and increasingly the focus of international attention. It flows through 6 countries: China, Myanmar, Laos, Thailand, Cambodia and Viet Nam. The 4 downstream countries have formed the Mekong River Commission to promote sustainable development of the river and many of their people depend on it for their subsistence. It has possibly the largest freshwater fishery in the world and the Mekong waters support rice agriculture in the delta in Viet Nam which produces about 40% of that country's food as well as in Cambodia, Laos and Thailand. China is now building the first large mainstream dam on the river and has proposals for several more. These dams are likely to affect the downstream countries. Several of the downstream countries also have plans for large scale hydropower and irrigation development which could also impact the river. This book will provide a solid overview of the biophysical environment of the Mekong together with a discussion of the possible impacts, biophysical, economic and social of some possible development scenarios. It is intended to provide a technical basis which can inform the growing political and conservation debate about the future of the Mekong River and those who depend on it. It is aimed at river ecologists, geographers, environmentalists and development specialists both in the basin and especially outside for whom access to this material is most difficult. This book will be the first comprehensive treatment of the Mekong system. The first comprehensive overview of all aspects of the Mekong River system. Deals with a regionally critical ecosystem and one under threat. The Mekong supports the world's largest freshwater fishery and provides water underpinning a major regional rice paddy system. Presents the authoritative findings of the Mekong River Commission's research for a wider audience for the first time outside of limited distribution reports.

Habitat Rehabilitation for Inland Fisheries Philip Roni, Food and Agriculture Organization of the United Nations, 2005-01-01. This technical paper reviews current information on the effectiveness of habitat rehabilitation techniques for inland fisheries based on published evaluations of projects including studies on roads improvements and sediment

reduction riparian and floodplain rehabilitation placement of habitat structures in lakes and streams and the addition of nutrients to increase aquatic production It also sets out information on planning prioritising and monitoring rehabilitation projects

Freshwater Fisheries Ecology John F. Craig, 2015-09-11 Inland fisheries are vital for the livelihoods and food resources of humans worldwide but their importance is underestimated probably because large numbers of small local operators are involved Freshwater Fisheries Ecology defines what we have globally what we are going to lose and mitigate for and what given the right tools we can save To estimate potential production the dynamics of freshwater ecosystems rivers lakes and estuaries need to be understood These dynamics are diverse as are the earth's freshwater fisheries resources from boreal to tropical regions and these influence how fisheries are both utilized and abused Three main types of fisheries are illustrated within the book artisanal commercial and recreational and the tools which have evolved for fisheries governance and management including assessment methods are described The book also covers in detail fisheries development providing information on improving fisheries through environmental and habitat evaluation enhancement and rehabilitation aquaculture genetically modified fishes and sustainability The book thoroughly reviews the negative impacts on fisheries including excessive harvesting climate change toxicology impoundments barriers and abstractions non native species and eutrophication Finally key areas of future research are outlined Freshwater Fisheries Ecology is truly a landmark publication containing contributions from over 100 leading experts and supported by the Fisheries Society of the British Isles The global approach makes this book essential reading for fish biologists fisheries scientists and ecologists and upper level students in these disciplines Libraries in all universities and research establishments where biological and fisheries sciences are studied and taught should have multiple copies of this hugely valuable resource About the Editor John Craig is Editor in Chief of the Journal of Fish Biology and has an enormous range of expertise and a wealth of knowledge of freshwater fishes and their ecology having studied them around the globe including in Asia North America Africa the Middle East and Europe His particular interests have been in population dynamics and life history strategies He is a Fellow of the Linnean Society of London and the Royal Society of Biology
