Mathematical Logic With Special Reference To The Natural Numbers:
     Mathematical Logic with Special Reference to the Natural Numbers S. W. P. Steen,1972 This book presents a comprehensive treatment of basic mathematical logic The author s aim is to make exact the vague intuitive notions of natural number preciseness and correctness and to invent a method whereby these notions can be communicated to others and stored in the memory He adopts a symbolic language in which ideas about natural numbers can be stated precisely and meaningfully and then investigates the properties and limitations of this language The treatment of mathematical concepts in the main body of the text is rigorous but a section of historical remarks traces the evolution of the ideas presented in each chapter Sources of the original accounts of these developments are listed in the bibliography   **Computability and Logic** George Boolos,Richard C. Jeffrey,1974-07-18   **Library of Congress Catalog** Library of Congress,1970   Contents of Contemporary Mathematical Journals ,1972-07   *Recursion* David J. Lobina,2017-07-21 This book provides a comprehensive account of the role of recursion in language in two distinct but interconnected ways First David J Lobina examines how recursion applies at different levels within a full description of natural language Specifically he identifies and evaluates recursion as a a central property of the computational system underlying the faculty of language b a possible feature of the derivations yielded by this computational system c a global characteristic of the structures generated by the language faculty and d a probable factor in the parsing operations employed during the processing of recursive structures Second the volume orders these different levels into a tripartite explanatory framework According to this framework the investigation of any particular cognitive domain must begin by first outlining what sort of mechanical procedure underlies the relevant capacity including what sort of structures it generates Only then the author argues can we properly investigate its implementation both at the level of abstract computations typical of competence level analyses and at the level of the real time processing of behaviour   *The National Union Catalogs, 1963-* ,1964   The Publishers Weekly ,1972   The Philosopher's Index: Subject index ,1980   **Pure and Applied Science Books, 1876-1982** ,1982 Over 220 000 entries representing some 56 000 Library of Congress subject headings Covers all disciplines of science and technology e g engineering agriculture and domestic arts Also contains at least 5000 titles published before 1876 Has many applications in libraries information centers and other organizations concerned with scientific and technological literature Subject index contains main listing of entries Each entry gives cataloging as prepared by the Library of Congress Author title indexes
     Ω-Bibliography of Mathematical Logic Wolfgang Rautenberg,1987-06-16 Gert H Muller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistica tion specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature partic ularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to

ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists some where in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg II Non classical Logics W Rautenberg III Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI Proof Theory Constructive Mathematics J E Kister D van Dalen A S Troelstra *The National union catalog, 1968-1972* ,1973

Encyclopaedia of Mathematics Michiel Hazewinkel,2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathe matics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivi sion has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science en gineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques
