## Mathematical Magic Show:

*Mathematical Magic Show* Martin Gardner, 2020-10-06 Martin Gardner's Mathematical Games columns in Scientific American inspired and entertained several generations of mathematicians and scientists. Gardner in his crystal clear prose illuminated corners of mathematics especially recreational mathematics that most people had no idea existed. His playful spirit and inquisitive nature invite the reader into an exploration of beautiful mathematical ideas along with him. These columns were both a revelation and a gift when he wrote them; no one before Gardner had written about mathematics like this. They continue to be a marvel. This volume first published in 1977 contains columns published in the magazine from 1965-1968. This 1990 MAA edition contains a foreword by Persi Diaconis and Ron Graham and a postscript and extended bibliography added by Gardner for this edition. *Mathematical Magic Show* Martin Gardner, 1977

**Mathematics Galore!** Christopher J. Budd, Christopher Sangwin, 2001-05-17 This book is a series of self contained workshops in mathematics which aim to enthuse and inspire young people, their parents and teachers with the joy and excitement of modern mathematics. Written in an informal style each chapter describes how novel mathematical ideas relate directly to real life. The chapters contain both a description of the mathematics and its applications together with problem sheets, their solutions and ideas for further work, project and field trips. Topics include mazes, folk dancing, sundials, magic castles, codes, number systems and slide rules. This book should be accessible to young people from age thirteen upwards and yet contains material which should stretch the brightest students.

*Explorations in Topology* David Gay, 2007-08-07 *Explorations in Topology* gives students a rich experience with low dimensional topology, enhances their geometrical and topological intuition, empowers them with new approaches to solving problems and provides them with experiences that would help them make sense of a future more formal topology course. The innovative story line style of the text models the problems solving process, presents the development of concepts in a natural way and through its informality seduces the reader into engagement with the material. The end of chapter investigations give the reader opportunities to work on a variety of open ended non routine problems and through a modified Moore method to make conjectures from which theorems emerge. The students themselves emerge from

these experiences owning concepts and results The end of chapter Notes provide historical background to the chapter s ideas introduce standard terminology and make connections with mainstream mathematics The final chapter of projects provides opportunities for continued involvement in research beyond the topics of the book Students begin to solve substantial problems right from the start Ideas unfold through the context of a storyline and students become actively involved The text models the problem solving process presents the development of concepts in a natural way and helps the reader engage with the material     **Mathematical Magic Show: More Puzzles, Games, Diversions...from Scientific American** ,1977
