During 1978-1982 the International Institute for Applied Systems Analysis IIASA was responsible for a research project on Environmental Quality Control and Management. The project was begun under the direction of Professor O. F. Vasiliev from the Institute of Hydrodynamics of the Siberian Branch of the USSR Academy of Sciences and was subsequently led by myself. This review is very much a reflection of that IIASA project. The major themes of the IIASA project were: research into the methodological aspects of modeling river and lake systems; some of the principal results of this research appear in M. B. Beck and G. van Straten (eds) 1983 *Uncertainty and Forecasting of Water Quality* Springer Berlin West and in K. Fedra (1983) *Environmental Modeling Under Uncertainty: Monte Carlo Simulation* IIASA Research Report RR 83/28; case studies in the application of mathematical models to lake eutrophication control results of which are summarized in L. *Mathematical Models for Water Quality for the Hudson-Champlain and Metropolitan Coastal Water Pollution Control Project*, 1968      Water Environment Modeling Clark C.K. Liu, Pengzhi Lin, Hong Xiao, 2021-11-01

Water Environment Modeling covers the formulations and applications of mathematical models that simulate water flow and chemical transport in rivers, lakes, groundwater, estuaries, coastal and ocean waters. These models are used to evaluate the response of water environment to human interventions and serve as useful analytical tools for water pollution control and resource management. Simple and comprehensive modeling techniques and their practical applications are presented with examples and exercises, most of which are derived from actual case studies. In general, simple models can be solved analytically and comprehensive models require numerical solutions. While simple models are usually adopted for preliminary assessment of a particular water environment, comprehensive models are used to provide detailed spatial and temporal variations of pollutants in complex environments. The system-based models in the forms of integral equations are introduced as an

alternative modeling approach This textbook is ideal for advanced undergraduate students and graduate students in civil and environmental engineering and related academic fields It is also suitable as a reference book for practicing engineers and scientists Authors Clark C K Liu is Emeritus Professor of the Department of Civil and Environmental Engineering at University of Hawaii and former Environmental Engineering Director of US National Science Foundation Pengzhi Lin is Professor of State Key Laboratory of Hydraulics and Mountain River Engineering at Sichuan University He is the author of Numerical Modeling of Water Waves CRC Press 2008 Hong Xiao is Professor and Vice Director of Hydroinformatics Institute of the State Key Laboratory of Hydraulics and Mountain River Engineering at Sichuan University
