our understanding of the natural world **Nonlinear Equations in Abstract Spaces** V. Lakshmikantham, 2014-05-27

Many problems in partial differential equations which arise from physical models can be considered as ordinary differential equations in appropriate infinite dimensional spaces for which elegant theories and powerful techniques have recently been developed This book gives a detailed account of the current state of the theory of nonlinear differential equations in a Banach space and discusses existence theory for differential equations with continuous and discontinuous right hand sides Of special importance is the first systematic presentation of the very important and complex theory of multivalued discontinuous differential equations **Mathematical Physics** - J.D. Poincaré, 2012-09-12 More than any other writer of the twentieth century Henri Poincaré brought the elegant but often complicated ideas about science and mathematics to the general reader A genius who throughout his life solved complex mathematical calculations in his head and a writer gifted with an inimitable style Poincaré rose to the challenge of interpreting the philosophy of science to scientists and nonscientists alike His lucid and welcoming prose made him the Carl Sagan of his time This volume collects his three most important books *Science and Hypothesis* 1903 *The Value of Science* 1905 and *Science and Method* 1908 **Catalogue and Circular (1878/79, 1884/85 "Circular") of the Illinois**

Differential Geometry and Mathematical Physics Gerd Rudolph, Matthias Schmidt, 2018-05-09 The book is devoted to the study of the geometrical and topological structure of gauge theories It consists of the following three building blocks Geometry and topology of fibre bundles Clifford algebras spin structures and Dirac operators Gauge theory Written in the style of a mathematical textbook it combines a comprehensive presentation of the mathematical foundations with a discussion of a variety of advanced topics in gauge theory The first building block includes a number of specific topics like invariant connections universal connections H structures and the Postnikov approximation of classifying spaces Given the great importance of Dirac operators in gauge theory a complete proof of the Atiyah Singer Index Theorem is presented The gauge theory part contains the study of Yang Mills equations including the theory of instantons and the classical stability analysis the discussion of various models with matter fields including magnetic monopoles the Seiberg Witten model and dimensional reduction and the investigation of the structure of the gauge orbit space The final chapter is devoted to elements of quantum gauge theory including the discussion of the Gribov problem anomalies and the implementation of the non generic gauge orbit strata in the framework of Hamiltonian lattice gauge theory The book is addressed both to physicists and mathematicians It is intended to be accessible to students starting from a graduate level **The Irish Church directory**
